## SUPERLIFT Attachment for the DEMAG TC-1200 Truck Crane

For applications where load moments in excess of 5426 foot-tons are encountered, the DEMAG TC 1200 Truck Crane can be equipped with a Superlift Attachment which permits load moments up to 12661 foot-tons. An increase of 233%, resulting in a 633 ton load moment chart at a 20' radius.

The performance benefits derived from the Superlift result from the fact that a heavier load is compensated by a corresponding counterweight. This causes the loads on the structural members of the crane, such as superstructure, slewing ring, undercarriage, and outriggers, to be applied centrally while relieving the boom assembly.

The additional counterweight is automatically lifted of the ground when attempting to pick up a load with the Superlift, so that the upper can be swung as desired. The Superlift Attachment consists of the following components which are readily mounted to our standard crane without major modifications:

- (a) Superlift Mast with head sheaves
- (b) Superlift Backstops
- (c) Counterweight Suspension Cables
- (d) Boom-Hoist Bridle
- (e) Additional Counterweight
- (f) Additional Hydraulic and Electric Controls
- (g) Conversion Parts to Overload Cut-Out
