Safety Regulations

All Technical Data are valid if the User Manual Instructions are followed.

Disclaimer

Hiab cranes have been built to meet the highest standards of safety and service life and have been thoroughly tested. Strength calculations for this model have been carried out in accordance with EN13001. Hiab’s certified Quality Assurance System complies with the ISO 9001. Some of the items in our literature may be extra equipment. Certain applications may require an official permit. We reserve the right to change technical specifications without prior notice. Hiab cranes produced for EU-countries are CE-marked and comply with the European Standard EN12999.

Explanation of Diagrams

Note: Crane models with X-angle on outer boom show more cases.

Height Stretched Diagram

This diagram indicates the height of the crane in two cases:
I Outer boom maximum upward and horizontal
II Outer boom maximum upward and hook attachment in line with theoretical "zero", the crane base's bottom side.

Side View Unfolded Close in Area

This drawing indicates the lifting height at 700 mm and 1000 mm from the heart of the crane column.

HIAB XS 288

Load Diagram

To the left of the curve the indicated loads can be handled with any loader function provided that the positions of the booms are optimized from a force point of view.

Load Diagram with Jib

This diagram shows the lifting capacity of the Jib in different boom positions.

Rotation Diagram

The white silhouette indicates the required space when rotating the crane body. Please note that hydraulic hoses are excluded from the diagram.

Specific values for stabilizer legs

This drawing shows the dimensions and measurements for the stabilizer legs. To find a configuration of stabilizer legs that match your application first choose a configuration of your choice in **Stabilizer Configuration**. Second, find the measurements in **Dimensions & Measurements**.
