## Superstructure

---

**UPPER REVOLVING FRAME:**

All-welded, precision machined, robust construction. A machined surface provided for mounting load hoist, opt. 3rd drum and boom hoist assemblies, and mounting itself on turntable bearing.

**TURNTABLE BEARING WITH INTERNAL SWING GEAR:**

Single shear ball type; inner race of turntable bearing with integral, internal swing (ring) gear bolted to carbody frame, and outer race of turntable bearing bolted to upper revolving frame.

**CONTROL SYSTEM:**

System contains one set each of quadruplicate and triplicate tandem valves which direct oil to various machine function and are actuated by control levers via remote controlled hydraulic servo for all motions. Working speeds can be precisely controlled by pilot-operated armchair single axis control levers in cooperation with “EPC” controller that varies engine rpm and hyd. pump discharge simultaneously, or varies just hyd. pump discharge while keeping engine rpm via motorcycle type grip throttle. System also takes a specially-tailored unique hydraulic circuits to maximizes drum horsepower, and reduces horsepower loss with eliminating the possibility of engine stall.

**Pump control system** — By “EPC” controller that provides two modes of engine-pump control.

**MODE I:**

The “EPC” controller is normally programmed to vary the engine speed and pump discharge simultaneously. Simply twisting the grip advances the engine to maximum speed and the hydraulic pumps to maximum flow at the same time. This mode is suitable to precision crane work.

**MODE II:**

By activating a switch, it is able to vary just the pump discharge by means of the grip throttle, while keeping engine speed fixed. Mode II is convenient for duty cycle works such as clamshell operation, where the engine is normally run at full throttle.

**A specially-tailored pressure compensating valve** —

Utilized in hydraulic circuits to realize a good minute operation of two main, boom hoist and opt. 3rd drums.

**HYDRAULIC SYSTEM:**

System provided with three variable displacement axial piston pumps for both independent and combined operations of all functions, and one fixed displacement duplicate tandem gear pump for system valve and cylinder controls.

**Main/aux. crane hoist motors** — Variable displacement axial piston motor with counterbalance valve.

**Boom hoist motor** — Axial piston type with counterbalance valve and spring-applied/power hydraulically released multiple wet-disc type automatic brake.

**Third drum motor** — Optional extra; variable displacement axial piston motor with counterbalance valve as same as that of main/aux. winches.

**Swing motor** — Two; axial piston type with spring-applied/power hydraulically released multiple wet-disc type brake.

**Travel motors** — Shoe-in design; variable displacement axial piston motor with brake valve and spring-applied/power hydraulically released multiple wet-disc type automatic brake.

**Oil cooler** — Aluminum-make; available for not only a good rustproof but also high cooling efficiency.

**Hydraulic oil reservoir** — 450 liters capacity.

**Kind of hyd. oil** — Standardized with ISO VG46 having viscosity ranging from 41.4 thru 50.6mm<sup>2</sup>/sec at 40°C.

#### LOAD HOIST ASSEMBLY:

Front and rear main operating drums driven by independent hydraulic motor of bi-directional, variable displacement axial piston motor through a 2-stage planetary reduction gear unit powering the rope drum in either direction for hoisting and lowering load. Reduction gear unit installed within drum inside together with multiple wet-disc brake unit. Drum each sized in same dimension.

**Brakes** — Multiple wet-disc unit with negative brake design that takes the function of "spring-applied, power hydraulically released", and maintains a high brake safety even if a hydraulic pressure drop in the circuit happens; installed within drum inside together with shaft-coupled reduction gear unit. Eliminate clutch, and require no brake maintenance on this brake design.

**Brake control** — Applies dynamic hydraulic pressure for brake release operation with an extreme light pedaling force.

**Brake mode** — Available in two modes; one is automatic as suitable for liftcrane operation, and the other is free-fall mode as suitable for bucket operation. Free-fall interlocking is also designed for fail-safe operation.

**A forced-oil cooling system** — Available in both front and rear drum brake units to keep brake performance even in continuous heavy-duty operations.

**Drum rotation sensors** — Fitted on top of control levers. Available to let operator sense a drum rotation speed turn according to the extent of the load applied to the hoist cable.

**Drum rotation speed control** — Max. rotation speed can be tuned according to arbitrary value that is electrically controlled by dialing, and then varies pump discharge. Available on two main operating drums independently.

**Motor swash plate angle setting switch** — Available to set motor swash plates of front/rear drum winch motors at a certain angle for easily synchronizing front and rear drum rotation speeds as good for clamshell /diaphragm wall bucket applications.

**Drums** — One piece, parallel grooved lagging with locking ratchet wheel cast integral; bolted to reduction gear unit. Available to wind up 41.9m long cable of 26mm dia. at drum 1st layer.

**Drum locks** — Electrically operated pawl.

**Drum rollers** — Optional extra; available for right cable winding onto drums.

#### BOOM HOIST ASSEMBLY:

Driven by bi-directional, axial piston hydraulic motor through 2-stage planetary reduction gear unit powering the rope drum in either direction for hoisting and lowering boom.

**Brake** — Spring-applied, power hydraulically released multiple wet-disc type automatic brake.

**Drum rotation sensor** — Fitted on top of control lever. Available to let operator sense a drum rotation speed decrease when the load is just applied.

**Drum rotation speed control** — Max. rotation speed can be tuned according to arbitrary value that is electrically controlled by dialing, and then varies pump discharge.

**Drum** — One piece, parallel grooved lagging with locking ratchet wheel cast integral; bolted to reduction gear unit.

**Drum lock** — Power hydraulically operated pawl with automatic locking device.

#### THIRD DRUM WINCH MECHANISM:

Optional extra; available in almost same design as that of front and rear main operating winches except drum lagging width and flange diameter.

**Brake** — Multiple wet-disc unit with negative brake design as same as that of front/rear main operating winches.

**Brake control** — Applies dynamic hydraulic pressure for brake release operation as same as that of front/rear main operating winches.

**Brake mode** — Available in two modes of automatic and free-fall as same as that of front/rear main operating winches. Free-fall interlocking is also designed for fail-safe operation.

**A forced-oil cooling system** — Available to keep brake performance as same as that of front/rear main operating winches.

**Drum** — One piece, parallel grooved lagging as same as that of front/rear main operating winches, except drum lagging width and flange diameter.

**Drum lock** — Electrically operated pawl.

#### SWING:

Driven by two units of bi-directional, axial piston hydraulic motors through one set each of single stage spur and planetary reduction gear unit powering swing pinion. Swing pinion meshes with internal teeth of swing (ring) gear of turntable bearing inner race.

**Brakes** — Spring-applied, power hydraulically released multiple wet-disc type; provided on each of hydraulic motor.

**Swing speed control** — Max. swing speed can be tuned according to arbitrary value that is electrically controlled by dialing, and then varies pump discharge.

**Lock** — Mechanically operated drop pin.

**Speed** — 1.9min<sup>-1</sup> <1.9rpm>.

#### GANTRY:

A-frame type; raised and lowered by power hydraulic cylinders.

**OPERATOR’S CAB:**

A 2.3mm thickness steel plate construction with 940mm wide and a stamped-and-rounded corner designs; acoustically treated, full-vision, cushion rubber mounted, well-ventilated, full compartment, roomy operator’s cab with a large straighted front window with green-tinted safety glass; provided with an arrangement of “EPC” control/swing lever, armchair control station, sunvisor, sunshade, rear-view mirrors, dual intermittent type window shield wipers with washer on both front and roof windows, sliding windows on both sides of cab, and swing-link type sliding door.

**Instrument panel** — Contains engine monitoring lamps, graphic display panel of Load Moment Indicator, gauges & meter, warning lamps and other necessary controllers and switches.

**Operator’s seat** — Full adjustable reclining seat with head rest and both R/H and L/H side arm rests.

**Air-conditioner** — Optional extra; built-in type full air-conditioning.

**Heater** — Optional extra; hot water type.

**Electric cab fan** — Optional extra; wind-direction adjustable type.

**Engine foot throttle** — Optional extra; available for right-hand foot with electrical control.

**Electric outlet** — 24V; available in cab.

**Operator’s cab sidestep** — Available for access ease to operator’s cab.

**AM/FM radio** — Provided as std. with clock.

**Fire extinguisher** — Optional extra; powder type with 1kg capacity.

**MACHINERY CAB:**

Equipped with hinged doors on both sides for machinery access and inspection; affixed with tape-type non-skid material on the roof.

**CATWALKS WITH RAILINGS:**

Optional extra; hitched in place along both sides of machinery cab.

**HYDRAULIC TAGLINE WINDER:**

Optional extra; available for clamshell application. Provided in front of upper revolving frame for preventing a shake of suspended load by a 10mm dia. tug cable with light force.

**COUNTERWEIGHTS:**

Weights 46ton with a 5-block, removable, corner-rounded design. Five blocks consist of “A” (10,400kg), “B” (8,900kg), “C” (8,900kg), “D” (8,900kg)and “E” (8,900kg).

**AUXILIARY WEIGHT:**

Weights 2.0ton. Mounted on part of optional 3rd drum location; if 3rd drum is optionally required, this aux. weight is not required.

**ELECTRICAL SYSTEM:**

24-volt negative ground system; provided with two maintenance free batteries of 12V×150AH.

**LIGHTING SYSTEM:**

- Includes following lights.
- Two 70 W working lights;
  - One 10 W interior cab light.

**SHAFTS AND PINS:**

Most of shafts and pins used on superstructure are with zinc or nickel or chromiun plating for rustproof except A-frame gantry peak shaft.

**POWER UNIT:**

|                  |                                                                |
|------------------|----------------------------------------------------------------|
| Make & Model     | Isuzu 6HK1X                                                    |
| Type             | Water-cooled, 4-cycle, direct injection, turbo-charged, diesel |
| No. of Cylinders | Six (6)                                                        |
| Bore & Stroke    | 115 mm × 125 mm                                                |
| Displacement     | 7,790 cc                                                       |
| Rated Output     | 212 kW/2,000 min <sup>-1</sup><br><288 ps/2,000 rpm>           |
| Maximum Torque   | 1,125 N·m/1,500 min <sup>-1</sup><br><115 kgf-m/1,500 rpm>     |
| Fuel Tank        | 415 liters                                                     |

Note:

1. The engine meets Stage/Tier 3 of current smoke emission regulations in Europe, America and Japan.
2. A 212kW engine horsepower shown above is defined under a current international engine horsepower indication formura which includes necessary horsepower for engine alternator drive but excludes engine fan drive.

# Undercarriage

**CARBODY FRAME:**

All-welded, precision machined, box type construction; provided with four tip blocks w/pins and lugs to hook and then assemble crawler side frames on. To mount turntable bearing, a machined surface is provided too.

**Hyd. removal joint-pins** — Four; available to hold in place crawler side frames on carbody frame with a face-contact design to bear reaction force of crawler side frame. And, a couple of two joint pins is each operated by a hyd. cylinder.

**CARBODY JACK-UP DEVICE:**

Contains four hydraulic jack cylinders with cylinder beams pinned to carbody frame for disassembling/assembling ease of crawler side frames.

**Remote control box** — Provided for control of carbody jack cylinders.

**Pontoon** — All-welded construction; four pontoons each stored at an inside part of jack cylinder beams.

**CRAWLER SIDE FRAMES:**

All-welded, box type construction, precision machined; each provided with two steel plate hooks for an assembling ease on carbody frame. Held in place by hydraulic removal heavy duty joint-pins provided on four tip blocks of carbody frame.

**Crawler side steps** — Provided at both ends of the frames for easy access to superstructure.

**CARBODY WEIGHT:**

Weighs 9.5ton; made of a cast iron block plus its steel plate box. 4.75ton each mounted at front and rear of the carbody.

**DRIVE SPROCKETS:**

Cast steel, heat treated; one per side frame. Track drive sprocket assembly bolt-coupled to 3-stage planetary reduction gear unit outer case as an integral part of shoe-in type traction motor. Sealed between parts of rotation and non-rotation of the motor with floating seal.

**IDLER WHEELS:**

Cast steel, heat treated; one per side frame. Mounted on two bronze bushings with floating seals for lifetime lubrication.

**TRACK ROLLERS:**

Eleven per side frame; each heat treated cast steel with double flange design. All mounted on two bronze bushings with floating seals for lifetime lubrication.

**CARRIER ROLLERS:**

Three per side frame; each heat treated cast steel with double flange design. All mounted on two bronze bushings with floating seals for lifetime lubrication.

**TRACKS:**

Heat treated, self-cleaning, multiple hinged track shoes joined by full floating pins; 55pcs. per side frame.

**Shoe width** — 965mm wide.

**Track adjustment** — Manual adjustment with oil jack and shim plate packs is standardized.

**Automatic track tension adjusting device** — Optional extra; available instead of std. track adjustment to always keep track tension at optimum level by means of power hyd. cylinder thru idler wheel actuated by power hydraulic supplied from superstructure.

**TRAVEL AND STEERING:**

A bi-directional, shoe-in type axial piston hydraulic motor bolt-couples with drive sprocket thru 3-stage planetary reduction gear unit outer case at each crawler side frame end for travel and steer. Straight-line travel (forward or reverse), pivot or differential turns, and counter-rotation for spin turns available.

**Brake** — Spring-applied, power hydraulically released multiple wet-disc type automatic brake; located within hydraulic motor. Brakes automatically set when travel levers are in neutral or when engine is shut down.

**Travel speed** — Two stages; 1.7/1.0km/hr. (based on flat, level and firm supporting surface, and under the conditions that no load must be applied and front-end att. must be the 15.0m basic boom only).

**Gradeability** — 30% (17°) permissible based on basic machine without front-end attachment.

load preventing system including total safe operation control system; provided with the designs of (1) no zero-point adjustment, (2) data input according to interface counter-indication/message on display panel, and (3) a graphic display panel with setting ease of viewing angle.

**Construction (standard version)** — Comprises (1) load detecting device with amplifier, (2) boom angle detector, (3) computerized Micro Processing Unit (M.P.U.), and (4) graphic display panel.

**Functions** — This system functions that if the lifting load reaches 90% of the rated one specified in the crane capacity chart, an intermittent pre-warning buzzer is given; if it is 100%, a warning is given by a continuous buzzer, and all peril side motions are automatically stopped. The machine, however, can be operated in safety side motions.

**Display panel design** — A graphic display panel is designed, and it is able to input necessary operating conditions/data according to interface counter-indication/message on the display panel, and the display panel indicates ten and some kinds of the present lifting and working conditions/data like “lifting load”, “max. allowable lifting load”, “working radius”, “max. allowable working radius”, “boom angle”, “load ratio”, “boom/jib lengths”, “engine rpm” and so on when working. In addition, the display panel is provided with three warning indicators over “engine over-heat”, “hyd. oil over-temp.” and “brake oil over-temp.”.

**HOOK OVER-HOIST LIMITING DEVICE:**

Limit switch type. Available to prevent hook over-hoisting with functions of automatic drum braking with hydraulic lock, and warning by buzzer.

**BOOM OVER-HOIST AND -LOWERING LIMITING DEVICE:**

Available in two kinds of devices; one is limit switch located on a part of boom foot for preventing boom over-hoisting, and the other is the safety function of the LMI available to automatically prevent boom over-hoisting and-lowering with the functions of automatic drum braking with hydraulic lock, and warning by buzzer. Further boom protection from rapid boom over-hoist by hook over-hoist motion under mal-function of hook over-hoist limiting device is available as one of functions of the LMI.

**BOOM BACKSTOPS:**

Dual; telescopic design with spring buffers.

**DUAL BOOM OVER-HOIST LIMITING DEVICE:**

Additional limit switch located on boom backstops; this is as a further safety device for redundant boom protection.

**SWING LOCK:**

Mechanically operated drop pin; available to firmly lock superstructure in four positions of facing front or rear or left or right to undercarriage.

**LOAD MOMENT INDICATOR:**

This is a fully computerized automatic over-

---

# Safety Devices

---

**DRUM LOCKS:**

Electrically operated pawl locks is available on front and rear main drums while power hydraulically operated pawl lock is available on boom hoist drum with an automatic locking device as std.

**THIRD DRUM LOCK:**

Provided as std. when an optional 3rd drum winch is provided.

**FREE-FALL INTERLOCKING DEVICE:**

Available on both front and rear main drum brake lines for fail-safe operation. Functions that free-fall brake mode is only available when drum brake pedal is pressed even though brake mode is switched on free-fall mode.

**SWING BRAKE SAFETY CIRCUIT:**

Available not to start engine whenever swing brake is off.

**NON-DRUM BRAKE PREVENTING DEVICE:**

Available not to start engine whenever drum brake mode is in "free-fall".

**BOOM ANGLE INDICATOR:**

Pendulum type; mounted on right-hand side of bottom section of crane main boom.

**HOOK LATCH:**

Provided on every kinds of hook to prevent out of place of cable from hook.

**LEVEL GAUGE:**

Bubble type; located on operator's cab floor of superstructure.

**CONTROL LEVER LOCKS:**

Provided on all control levers (except swing lever) to lock levers in neutral.

**SWING ALARM:**

This is by buzzer, and flasher lamps located on both sides of machinery cab.

**TRAVEL ALARM:**

Available by an intermittent buzzer.

**SPEED SLOWDOWN DEVICE:**

This is for speed slowdown of hoisting and lowering motions of boom which are available just before automatic stopping at both upper and lower side limits of boom angle even though control lever(s) is still at hoisting/lowering position to prevent a shock.

**SWING BRAKE LAMP:**

Provided on operator's cab instrument panel; this is available to confirm whether or not swing brake is applied.

**SIGNAL HORN:**

Available as warning just before every kinds of motions are initiated.

**FOOL PROOF SHUT-OFF SYSTEM:**

Located in the cab exit; this is available to automatically deactivate and lock hydraulic system.

**FRONT-END ATT. ERECTION MODE:**

This is an internal, integral function of the LMI. In the range out of crane working area, the LMI display panel automatically indicates "Now, out of crane working range" with a rigging instruction, and it is available to lift front-end att. off ground without the influence of LMI safety

functions, and, after front-end att. is lifted over the range of crane working area, LMI safety fuction gets back automatically for safe erection work. This function is also available for the work of vice-versa.

**LMI SAFETY CIRCUIT-OFF SWITCH:**

Available in key type for a good crane safety operation management without fail.

**TRAVEL DIRECTION ARROW:**

Attached each on crawler side frames.

**GAUGES & METER:**

Engine water temperature gauge, fuel gauge and hour-meter are provided on instrument panel.

**WARNING LAMPS:**

Available to let operator warn abnormal machine conditions as to pilot pressure and brake system of two main and opt. 3rd drums.; provided on instrument panel.

**ENGINE MONITORING LAMPS:**

Available to let operator warn engine abnormal conditions as to battery charge, lubrication oil pressure, radiator coolant level, oil filter clogging, air filter clogging, water temp., contorol unit and glow plug.; provided on instrument panel.

**EMERGENCY ENGINE STOP SWITCH:**

Located at cab instrument panel, and available to stop engine whenever it is necessary.

**REAR VIEW MIRRORS:**

Two; provided on front-left and -right corners of super-structure.

**THREE COLOR PERCENTAGE INDICATOR:**

Optional extra; this is with three colours of Green, Yellow and Red. Each colour indicates the load percentage to rated capacity; Green shows less than 90% as safety, Yellow shows 90 to 99% as marginal, and Red shows over 100% as over-loading. As further function, Red lamp comes on automatically when operator cuts off safety circuit of the LMI absent-mindedly.

**LIFTING HEIGHT INDICATION DEVICE:**

Optional extra; available to indicate lifting height above ground or depth below ground on display panel of the LMI. Aiso, hook hoisting speed slowdown function is available just before automatic stopping at a desired height under hook height setting before operation.

**MICROPHONE & LOUD-SPEAKER:**

Optional extra; this is for operator's convenience for loud speaking.

**DRUM LIGHT & MIRROR:**

Optional extra; these are available for checking rope winding onto front and/or rear drum(s).

**AUX. CRANE HOOK OVER-HOIST LIMITING DEVICE:**

Optional extra; this is available for auxiliary crane hoist with optional aux. short jib and/or fly jib. Performs the same function as that of "Hook over-hoist limiting device" mentioned before.

# Front-end Attachment

**BOOM:**

- Lattice construction, round tubular main chords, alloy, hi-ten steel, with bracing of round steel tubing.
- Boom connections.....In-line pin connections at 1.85m deep and 1.85m wide.
- Basic boom.....Available in two kinds of length under optionally selective different top section.
  - Selection1 - Two-piece, 15.0m basic length; 7.5m bottom and 7.5m tapered top section for an 135t nominal lift.
  - Selection2 - Two-piece, 12.0m basic length; 7.5m bottom and 4.5m heavy-duty tapered top section for an 150t nominal lift.
- Note:** One of two kinds optionally selective top section must be chosen whenever purchas of this SCX1500-2.
- Boom head machinery .....According to two kinds of optional top section, boom head machinery is desinged as under:
  - Case1 with 7.5m tapered top section -  
Six head sheaves and two guide sheaves with rigid type rope guard for optional 15.0m basic boom. Sheaves all mounted on anti-friction beanings of conventional, non seated grease type.
  - Case2 with 4.5m heavy-duty tapered top section -  
Seven head sheaves and two guide sheaves with rigid type rope guard for 12.0m basic boom as std. Sheaves all mounted on anti-friction beanings of conventional, non seated grease type.
- Boom extensions.....Optional extra; available in 3.0m, 6.0m and 9.0m lengths with pendants.
- Maximum boom length.....75.0m for liftcrane application (under a 7.5m tapered top section).  
27.0m for clamshell application.

**FLY JIB:**

- Optional extra; lattice construction, round tubular main chords, alloy, hi-ten steel, with bracing of round steel tubing having in-line pin connections at 0.75m deep and 0.94m wide, and jib head machinery with single sheave mounted on antifriction bearings of conventional, non sealed-grease type. Provided with jib strut, jib backstops, and jib/boom guyline pendants. Available to mount on 7.5m tapered crane top section for light load lifting operation with less than 11ton under single part hoist line.
- Basic fly jib .....Two-piece, 10.0m basic length; 5.0m bottom and top sections.
- Fly jib extensions .....Available in 6.0m length with pendants.
- Maximum fly jib length .....28.0m.
- Boom plus fly jib length.....Max. 60.0m + 28.0m / 63.0m + 22.0m (available in boom configuration with 7.5m tapered top section).

**AUXILIARY SHORT JIB:**

- Optional extra; all-welded construction having single sheave head machinery. Pinned to 7.5m tapered top section. Available for 11ton lift as maximum with single part hoist line.

**HOOK BLOCKS:**

- Sheaves all mounded on anti-friction bearings. Available in 5 kinds of capacities as under:
  - 150t, seven sheaves with duplex type hook .....Optional extra.
  - 135t, six sheaves with duplex type hook.....Optional extra.
  - 50t, two sheaves .....Optional extra.
  - 30t, one sheave .....Optional extra.
  - 11t, ball hook .....Optional extra.

**BAIL AND BRIDLE:**

- All-welded construction; provided with larger sheaves of a 21.0 D/d ratio on both bail and bridle for 12-part boom hoist rope reeving. Bail pinned to A-frame gantry, and bridle suspended between a 12-part boom hoist rope and pendant ropes connecting to tip of 4.5/7.5m tapered top section. Sheave all mounted on anti-friction bearings of conventional, non sealed-grease type.

DRUM DATA:

| Drum                                                      | Root dia. | Type             | Line speed<br>(Hoisting, Lowering) | Cable  | Max.<br>line pull |
|-----------------------------------------------------------|-----------|------------------|------------------------------------|--------|-------------------|
| Front<br>(main crane hoist)<br>(clamshell bucket closing) | 554mm     | Parallel grooved | 110 ~ 2mpm<br>*75 ~ 2mpm           | 26mm   | 196kN<br><20t>    |
| Rear<br>(aux. crane hoist)<br>(clamshell bucket holding)  | 554mm     | Parallel grooved | 110 ~ 2mpm<br>*75 ~ 2mpm           | 26mm   | 196kN<br><20t>    |
| Boom hoist                                                | 463.6mm   | Parallel grooved | 46 ~ 2mpm                          | 22.4mm | 152kN<br><15.5t>  |
| Optional 3rd                                              | 554mm     | Parallel grooved | 73 ~ 2mpm                          | 26mm   | 196kN<br><20t>    |

- Notes:**
- 1. Line speed is based on drum first layer and rated engine rpm.
  - 2. Hoisting line speed varies under load and operating conditions.
  - 3. The figures with an asterisk mark(\*) indicate the rope line speed as available for clamshell bucket application.

HOIST REEVING:

| Kind of<br>hook block | No. of<br>partline | 14    | 12    | 11    | 10    | 9    | 8    | 7    | 6    | 5    | 4    | 3    | 2    | 1    |

CABLES:

- Front drum.....3×F (a+40), non-spin type, 26mm dia./300m long, breaking load 569kN <58.0t>.
- Rear drum .....Optional extra; 3×F (a+40), non-spin type, 26mm dia./200m long, breaking load 569kN <58.0t>.
- Boom hoist drum.....IWRC 6×P·WS (31), 22.4mm dia./195m long, breaking load 367kN <37.4t>.
- Optional 3rd drum .....Optional extra; 3×F (a+40), non-spin type, 26mm dia., breaking load 569kN <58.0t>. Length depends on request.

# Boom Combination Diagram

■w/ 7.5m tapered top section:

| 21.0               | ★                |

Note:

1. The meanings of figures and symbols shown above are as follows:

- : 7.5m bottom section
- : 3.0m boom extension
- : 7.5m tapered top section
- : 6.0m boom extension
- : 4.5m heavy-duty tapered top section
- : 9.0m boom extension

2. A star mark ( ★ ) indicates manufacturer's recommendable boom configuration. If other boom configuration is required other than the above, please consult us or nearest distributor.

# Liftcrane Working Ranges (1)

■w/ 4.5m heavy-duty tapered top section:

**Notes :**  
The above diagram shows two kinds of locuses of boom peak sheave and hook points; the lower lines each indicate the locus of hook point, and these upper lines each show the locus of boom peak sheave point.

# Liftcrane Capacities 150/135 metric tons

(EC405003)

## ■WORKING MASS & GROUND PRESSURE:

| Shoe width | Mass   | Pressure             |
|------------|--------|----------------------|
| 965mm      | 129.0t | 96.0kPa <0.98kg/cm²> |

Note: Working mass shown above is with 12.0m basic boom with 4.5m heavy-duty tapered top section, 46ton counterweight, 2.0ton auxiliary weight, 9.5ton carbody weight and 150t hook block.

## ■WORKING MASS & GROUND PRESSURE:

| Shoe width | Mass   | Pressure             |
|------------|--------|----------------------|
| 965mm      | 128.0t | 95.0kPa <0.97kg/cm²> |

Note: Working mass shown above is with 15.0m basic boom with 7.5m tapered top section, 46ton counterweight, 2.0ton auxiliary weight, 9.5ton carbody weight and 135t hook block.

**Notes — Liftcrane capacities**

- 1. Capacities included in this chart are the maximum allowable, and are based on machine standing level on firm supporting surface under ideal job conditions.
- 2. Capacities are in metric tons, and are not more than 78% of minimum tipping loads except the figures surrounded by bold lines which are based on other factor of machine structural strength limitation; the design codes/standards applied to the capacity are from "Construction Codes for Mobile Crane" and "Ordinance on Safety of Crane and Similar Equipment" issued by Ministry of Health, Labour and Welfare, Japan.
- 3. Capacities are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, and operating speeds. Operator must reduce load ratings to take such conditions into account. Deduction from rated capacities must be made for mass of hook block, weighted ball/hook, sling, spreader bar, or other suspended gear.  
Hook block mass is as follows:  
150t.....2.04ton    135t .....1.98ton    50t .....0.90ton  
30t.....0.73ton    11t .....0.37ton
- 4. All capacities are rated for 360° swing.
- 5. Least stable rated condition is over the side.
- 6. A 46ton counterweight, 9.5ton carbody weight and 2.0ton aux. weight (or opt. 3rd drum) are required for all capacities on these charts.
- 7. Attachment must be erected and lowered over the front of the crawler mounting.
- 8. Main boom length must not exceed 75.0m.  
Maximum fly jib length permitted — 28.0m.  
Maximum boom and fly jib combination length permitted — 60.0m + 28.0m / 63.0m + 22.0m.  
Maximum boom length when mounting auxiliary short jib is 69.0m.
- 9. Capacities when handling load off main boom head sheaves in case of mounting fly jib or auxiliary short jib on top of boom are detailed; if required, please consult us or nearest distributor.

**SCX1500-2 AUXILIARY SHORT JIB CAPACITIES:  
Max. 11t**

**Note:** Jib capacities is almost equal to the figures made by the deduction of a 300kg from the liftcrane capacities for boom length up to 69.0m unless restricted by the maximum jib capacity shown above. As to the details, please consult us or nearest distributor.

\*This illustration shows with 7.5m tapered top section.

**Auxiliary short jib (Option)**

# Liftcrane Working Ranges (2)

■w/ 7.5m tapered top section:

**Notes :**  
The above diagram shows two kinds of locuses of boom peak sheave and hook points; the lower lines each of boom / fly jib indicate the locus of hook point, and these upper lines each show the locus of boom peak sheave point.

# Fly Jib Capacities 11 metric tons

(EC405006)

Notes — Fly jib capacities

1. Capacities included in these charts are the maximum allowable, and are based on machine standing level on firm supporting surface under ideal job conditions.
2. Capacities are in metric tons, and are based on 78% of minimum tipping loads except the figures surrounded by bold lines which are based on other factor of machine structural strength limitation; the design codes/standards applied to the capacity are from “Construction Codes for Mobile Crane” and “Ordinance on Safety of Crane and Similar Equipment” issued by Ministry of Health, Labour and Welfare, Japan.
3. Capacities are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, and operating speeds. Operator must reduce load ratings to take such conditions into account. Deduction from rated jib capacities must be made for weight of hook block, weighted ball/hook, sling, spreader bar, or other suspended gear.  
Hook block weight is as follows;  
11t.....0.37ton
4. All capacities are rated for 360° swing.
5. Least stable rated position is over the side.
6. A 46ton counterweight, 9.5ton carbody weight and 2.0ton aux.weight (or opt.3rd drum) are required for all capacities on these charts.
7. Attachment must be erected and lowered over the front of the crawler mounting.

8. Maximum fly jib length permitted is 28.0m, and maximum boom and fly jib combination length permitted is 60.0m boom plus 28.0m fly jib.

# Clamshell 2.0m³ over

## CLAMSHELL RATINGS: (in metric tons)

| Boom length (m)    | 15.0       | 18.0       | 21.0       | 24.0       | 27.0       |
|--------------------|------------|------------|------------|------------|------------|
| Working radius (m) |            |            |            |            |            |
| 8.5                | 10.00      |            |            |            |            |
| 9.0                | 10.00      | 10.00/9.7  |            |            |            |
| 10.0               | 10.00      | 10.00      | 10.00/11.0 |            |            |
| 12.0               | 10.00      | 10.00      | 10.00      | 10.00/12.3 | 10.00/13.5 |
| 14.0               | 10.00      | 10.00      | 10.00      | 10.00      | 10.00      |
| 16.0               | 10.00/14.2 | 10.00      | 10.00      | 10.00      | 10.00      |
| 18.0               |            | 10.00/16.6 | 10.00      | 10.00      | 10.00      |
| 20.0               |            |            | 10.00/19.1 | 10.00      | 10.00      |
| 22.0               |            |            |            | 10.00/21.5 | 10.00      |
| 24.0               |            |            |            |            | 10.00      |

### Notes:

- Max. clamshell rating is 10.0t.
  - Mass of bucket plus load should not exceed clamshell ratings shown above. Following data are for a general digging application buckets.
- |                 |       |       |
|-----------------|-------|-------|
| Bucket capacity | 2.0m³ | 2.5m³ |
| Bucket mass     | 4.5t  | 5.5t  |
- In case of clamshell application, a 15.0m boom is recommended as minimum length of boom, and max. boom length shall not exceed 27.0m.
  - Apparent specific gravity of lifting material:  
Earth .....1.7~1.8t/m³  
Gravel .....1.8~2.0t/m³
  - A 37.1t counterweight arranged by deduction of counterweight “C” (8.9t) or “D” (8.6t) from a 46t full counterweight, 9.5t carbody weight and 2.0t aux. weight are required for all clamshell ratings shown above.
  - Max. digging depth below ground shall be 36m.

## WORKING MASS & GROUND PRESSURE:

| Shoe width | Mass    | Pressure               |
|------------|---------|------------------------|
| 965mm      | 121.9 t | 90.4 kPa < 0.92kg/cm²> |

**Note:** Working mass shown above is with 15.0m boom with 7.5m tapered top section, 37.1ton counterweight, 9.5ton carbody weight, 2.0ton aux. weight, hydraulic tagline winder and 2.5m³/5.5t clamshell bucket.

## BUCKET DIMENSIONS: (in m)

|   |                                | 2.0m³ | 2.5m³ |
|---|--------------------------------|-------|-------|
| A | Bucket overall height (opened) | 4.59  | 5.13  |
| B | Bucket overall height (closed) | 3.78  | 4.18  |
| C | Bucket opening width           | 3.24  | 3.45  |

### Notes:

- Buckets of 2.0/2.5m³ are for a general excavating purpose.
- Other type of bucket than above is also available.

# Transport Data
