Notes

- Above rated loads are based on firm level ground, within 78% of tipping load at any point 360° throughout and with front stability of 1.15 or more.
- The weight of the hook block and other lifting devices must be considered to be part of the load.
4.9 ton hook block.....80Kg
- Rated lifting loads for carrying operation are based on operation firm and level surface after load has been lifted from the ground on fixed operation.
In carrying operation, keep load close to ground and do not allow swinging. No abrupt, stop or spin turn should be allowed while carrying loads.
- Do not raise or lower, or extend or retract boom while carrying loads.
- Depending on the number of part lines, rated lifting load is limited as follows:
2 part line.....up to 2.5 ton
4 part line.....up to 4.9 ton
- Hoist wire rope specification and guaranteed breaking strength.
10 mm dia. - 6 x Fi(29)IWRC Grade B 67.7N (6.90tf)
or
10 mm dia. - 6 x Fi(29)IWRC Grade A 63.6N (6.49tf)
- Maximum working radius decided by boom angle 10 degree on each boom length.
