FULLY HYDRAULIC TRUCK CRANE

MODEL

KATO WWORKS COLLID. TOKYO

KATO NK-300

FULLY-HYDRAULIC FULL-SLEWING TRUCK CRANE

SINGLE LEVER CONTROL 4 SECTION "FULL POWER" BOOM:

Each section of boom has an independent hydraulic cylinder, permitting the boom length quite free on extension or retraction within the range from minimum 10 m to maximum 31 m in length. Controlled by only one lever.

NEW CONTROLLED FREE FALL "FREOMATIC" WINCHES

ENSURE SPEEDY OPERATION:

Tandem-drive two speed main and auxiliary winches are driven by high-torque hydraulic motor, having automatic brakes and clutches. This mechanism enables the safe operation of "Free Fall" or "Power Lowering" of the hook.

"GLIDE-MASTER" PLANETARY SLEWING:

"Glide-Master" planetary slewing system enables smooth, precise slewing operation, and in addition a hydrostatic controlled disk brake is provided.

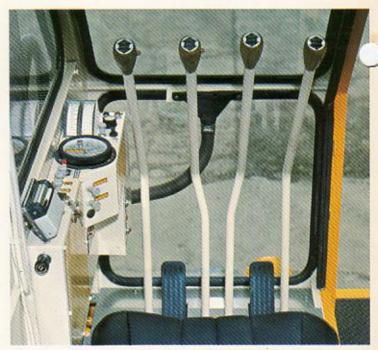

FULL VISION SUPERSTRUCTURE CAB:

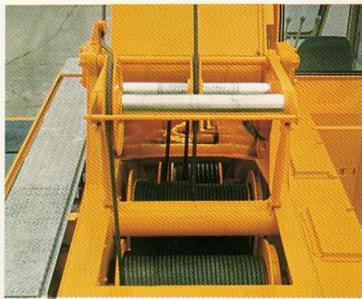

Provided with safety glass in all windows and all necessary control levers, gauges, instruments, etc. are well arranged at convenient location for the operator. A comfortable reclining seat gives no fatigue to the operator.

AUTOMATIC SAFETY CUT-OUT: (A.S.L.I.)

Automatic Safety Load Indicator shows continuously both the rated allowable load and the actual lifting status along the boom length and working radius. For a safe operation, a buzzer warns of the danger as soon as the crane operation reaches any overload condition and then the hydraulic power is cut off automatically in the event of dangerous excess. (optional)

3 position 4 way doubleacting type with integral check, and relief valves. Double acting type with

safety check valve or balancing valve.

Cylinder:

NOTES

 The rated lifting capacities are the maximum loads guaranteed on a firm level ground and include the weight of hook block and other lifting equipments.

Hook	for 30 ton	for 12 ton	for 4 ton	
Weight (kg)	350	200	100	

The capacities in the blue area are based on the structural strength and other capacities do not exceed 75% of tipping loads.

- The working radii are the actual values including the deflection of the booms.
- The rated lifting capacities for operation without outriggers are based on best conditions of tyre pressure and ground surface.
- 4. The capacities are based on use of outriggers fully extended. Any operation is prohibited unless the outriggers are fully extended even if in no load condition except the shortest boom 10 m.
- When the boom length exceeds the rated one, operation must be carried out under the lifting capacities rated for the longer rated boom length.
- When using boom with jib extended, 1,000 kgs should be subtracted from rated lifting capacities.

- With the jib installed, the boom must not be lowered below 45° to avoid tipping.
- Minimum number of parts line must be calculated considering single line pull has 4,000 kgs lifting capacity. Standard number of parts line for each boom length is as follows.

Boom length	10m	10m~17m	17m~24m	31m
Parts line	8	5	4	3
