

# **SUPERBOOM**

# **SR-250R**

# **ROUGH TERRAIN CRANE**

# **[SPECIFICATION]**

Description	<u>IE</u>	Rough terrain crane v	vith maximum lift	ing capacity 25 ton								
	Specification		THE THE STATE OF T	ing capacity 20 ten								
			5,000kg × 3.5m	(Parts of line : 7)								
		16.4 m Boom 19	0,000kg × 4.0m	(Parts of line : 6)								
Maximum ra	tod lifting	23.45 m Boom 12	2,500kg × 5.5m	(Parts of line : 4)								
capacity	itea iirtirig		,000kg × 7.5m	(Parts of line : 4)								
, ,			3,300kg × 75°	(Parts of line : 1)								
			2,100kg × 73°	(Parts of line : 1)								
Poom longth		Rooster 4 9.35m — 30.5m	,000kg	(Parts of line : 1)								
Boom length Fly jib length		8.7m — 13.1m										
Maximum ra		31.2m (Boom)										
neight	iteu iirtii ig	44.8m (jib)										
Hoisting	Main winch	125m / min. (at 4th lay	ver)									
ine speed	Auxiliary winch	125m / min. (at 4th lay										
winch up) Hoisting	Main winch	(Parts of line; 7): 17		lovor								
nook speed				•								
winch up)	Auxiliary winch	(Parts of line; 1) : 125	.0m / min. (at 4tr	layer)								
High-speed owering	Main winch	Reference value with	no load at 163m	/ min (at 4th laver)								
Rope speed	Auxiliary winch	Troiciono valdo with	110 1000 01 100111	/ IIIII. (at 4th layon)								
Boom derric		0° — 83°										
Boom derric		40s / 0° — 83°										
Boom exten		9.35 — 30.5m / 93s										
Slewing spe		2.9min <sup>-1</sup>										
Tail slewing		3,100mm										
Equipm	ent and stru											
Boom type		Box-shaped, 4-section										
		(Boom section 3 / 4 si										
Jib type		2 sections (2nd section Hydraulic stepless tilting)										
Boom exten		Two hydraulic cylinde										
	king/lowering	One hydraulic cylinde		type with pressure-								
equipment		compensated flow co										
Winch syste Main & Auxi	m liary winches		ulic motor drive a tive brake), High/	nd Planetary gear speed Low speed switching systematics and control of the contro								
Slewing equ	ipment			nd a planetary gear speed Lock change-over model								
Slewing bea	ring	Ball bearing type										
	Type	Hydraulic H-beam typ	e (with float and	vertical cylinder in single u								
		6,600mm (Fully extended)										
Outriggers	Extension	6,000mm (Intermediately extended)										
99	width	5,000mm (Intermediately extended)										
		3,800mm (Intermedia										
		2,310mm (Fully retrac										
Wire rope	Main winch	Diameter: 16mm×Lei										
	Auxiliary winch	Diameter: 16mm×Lei	ngth: 95m									
	lic equipme											
Oil pump	Hatada	Double variable plung	jer type, gear an	a plunger type								
	Hoisting motor	Axial plunger type										
		Axial plunger type										
	Slewing motor			roliof valvos								
motor	Slewing motor	Double acting with int										
motor Control valve	Slewing motor

CARRIE	-R	
OCarrier Sp		nn
Maximum trave		
Grade ability	iii ig speed	$0.60 (\tan \theta)$
Minimum turnin	a radius	8.2m (2 wheel steer)
(center of extrem		4.9m (4 wheel steer)
● Engine		
Model		Mitsubishi 6M60-TLE3A (with Intercooled turbocharger)
		4 cycle, 6 cylinders, water cooled, direct injection turbo-charged
Туре		diesel engine with intercooling
Piston displace	ment	7.545L
Max. power		200kW at 2,600min <sup>-1</sup>
Max. torque		785N·m at 1,400min <sup>-1</sup>
Equipmen	t and str	
Drive system		Switches between 2 wheel drive (4x2) and 4 wheel drive (4x4)
Torque converte	er	Engine mounted 3 elements 1 stage (with lock up clutch)
Transmission		Remote mounted full automatic
	ode	4 forward & 1 reverse speed
Number of spee		(with HI - Low selector)
Axles	Front	Full floating type, with a two-stage reduction gear
	Rear	Full floating type, with a two-stage reduction gear
Suspension	Front	Taper - leaf spring (hydraulic locking device with shock absorber)
· · · · · · · · · · · · · · · · · · ·	Rear	Taper - leaf spring (hydraulic locking device with shock absorber)
	Service	Air-over hydraulic disk brake on 4 wheels (front and rear independent circuit)
Brake system	Parking	Spring applied, electrically air released parking brake mounted or front axle, internal expanding type
	Auxiliary	Exhaust brake (electronically controlled torque convertor interlocking
		Eddy current type retarder, Auxiliary braking unit for working
	Model	All hydraulic power steering with reverse steering correction syste
Steering	Mode	Front 2 wheel steering, counter steering, crab steering, rear 2 wheel steering, independent front and rear wheel steering (5 modes) (with automatic rear steering lock system)
Tire size	Front	385 / 95 R25 170E ROAD
1116 5126	Rear	385 / 95 R25 170E ROAD
Fuel tank capac	city	300 L
Batteries		(12V-120AH) ×2
<ul><li>Safety dev</li></ul>	vices	
		Emergency steering device, Rear wheel steering lock system (automatic), Miss-shifting prevention system, Brake fluid leak warning device, Service brake lock, Suspension lock, Engine overspeed alarm, Radiator coolant level warning device, Electrically stowed side mirrors, Mirror on the right side of the boom, Rearview camera and color monitor, Air filter service warning device
Standard	equipme	
		Centralized lubricating system
Optional e	quipmen	
		Right side view camera, Left side view camera, Wheel stopper, Way side lamp, Side marker lamp
GENER Overall length	AL Din	nensions
Overall width		2,620mm
Overall height		3,475mm
Wheel base		3,650mm
	Front	2,170mm
Treads	Rear	2,170mm
Passenger cap		One person
3	Gross weight	approx. 26,495kg
Gross vehicle mass	Front weight	approx. 13,180kg
	Rear weight	approx. 13,315kg

## ■Notes for the lifting capacity chart

#### ■When the outriggers are used

 The lifting capacity chart indicates the maximum load which can be lifted by this crane provided it is level and standing on firm level ground. The values in the chart include the mass of the main hook and slings for boom operation, and auxiliary hook and slings for jib operation.

[25 ton hook (mass: 220kg), 4 ton hook (mass: 60kg)]

Within the chart the figures in the area bordered with a thick line are based on structural limitations while other figures are determined by stability limitations.

- 2. The working radii are the actual values allowing for boom and jib deflection. Therefore you must always operate the crane on the basis of working radius.
- 3. The jib working radius is based on the jib mounted on the end of the 30.5m boom. When operating at other boom lengths, use the boom angle alone as the criterion.
- Do not operate the jib when the outriggers are completely retracted.
- 5. The lifting capacities for the over sides vary with the outriggers extension width. Therefore for each outriggers extension condition you should work according the lifting capacity chart. Use the lifting capacity chart of outriggers full extended for both front and rear areas lifting capacities.

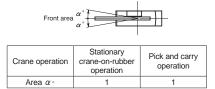

Outrigger extension status	Intermediate extension (6.0m)	Intermediate extension (5.0m)	Intermediate extension (3.8m)	Full retraction
Area α∘	35	30	20	3

- 6. The lifting capacity of the rooster sheave is the lifting capacity of the boom minus the mass of all attached hook, slings etc. to the boom, with an upper limit of 4,000kg.
  - [The hook for use with the rooster sheave is the 4 ton hook (mass: 60kg) with one part of line.]
- 7. If the boom length, boom angle, working radius and/or jib angle exceeds the rated value, use the lifting capacity for the rated value or for the next one, whichever gives the smaller lifting capacity.
- 8. If you are working with the boom while the jib is rigged, subtract 2,400kg plus the mass of all attached hook, slings etc. to the boom from the each lifting capacity of the boom, with an upper limit of 14 ton.
  - Do not use the rooster sheave in this situation. And do not operate the boom while the jib is rigged, when the outriggers are completely retracted.
- 9. In whatever working conditions the corresponding boom critical angel is shown in the chart. The crane can tip over if the boom is lowered below the critical angle even if unloaded.
  - Therefore, never lower the boom below these angles.
- 10. The standard parts of line for each boom length are as indicated in the chart. If you work with a non-standard number of parts of line, do not exceed 37.2kN (3.8tf) per wire rope respectively.
- 11. If you are work with 7 parts of line on the hook, use the rooster sheave.
- High-speed lowering operation should only be performed to allow descent of the hook alone. Avoid sudden lever operation.
- Outriggers full retraction condition is applied only to the crane with H-type outriggers.
- 14. Crane operation is permissible up to a wind speed of 10m/s. Even in relatively light wind conditions, extra care should be taken when handling loads presenting large wind catching areas.
- 15. Kato bears no liability whatsoever for crane tipping or damage caused by crane operations with a load in excess of the lifting capacity or incorrect procedure.

#### ■When the outriggers are not used

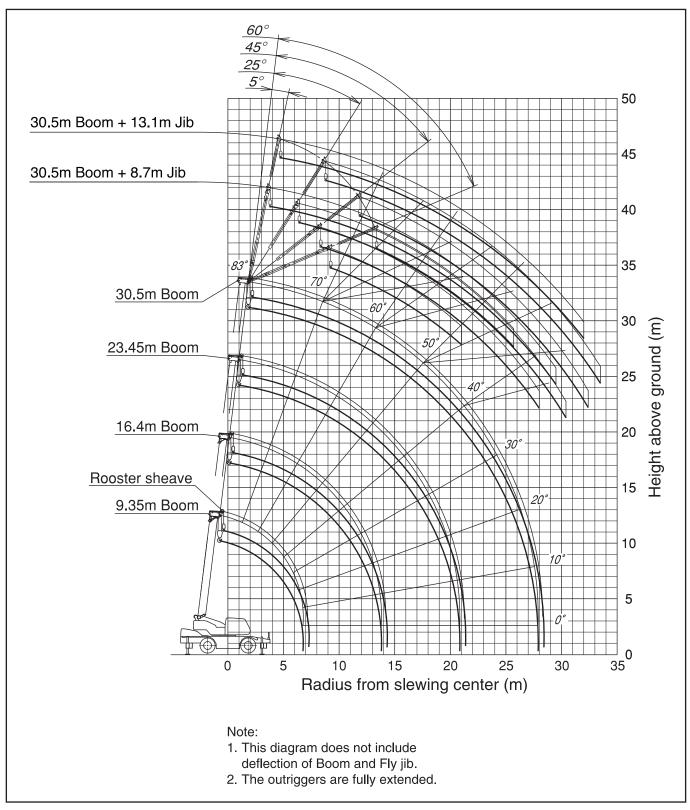

- The lifting capacity chart indicate the maximum load the crane can lift when its body is level on firm level ground with all tires inflated to the rated pressure and suspension cylinder completely retracted. The values in the chart include the mass of the main hook and slings.
  - Within the chart the figures in the area bordered with a thick line are based on structural limitations while other figures are determined by stability limitations.
  - [Rated tire pressure: 900kPa (9.0kgf/cm²)]
- The working radii are the actual values allowing for boom deflection. Therefore you must always operate the crane on the basis of the working radius.
- The lifting capacity differs between the front area capacity and the full range capacity. When slewing from the front to the side, take care that the crane could not be over loaded.

- 4. Do not work with the jib or with a boom length of more than 23.45m.
- 5. For stationary crane-on-rubber operation, the parking brake and service brake lock device must be engaged.
- For pick and carry operation, the high/low speed switch must be switched to "ON" (low range) and the shift lever set to speed 1.
- For pick and carry operation, lower the load to just above the ground and keep your speed strictly below 2km/h to avoid swinging the load.
  - Take particular care to avoid sharp turns, sudden starts and stops.
- 8. Never operate the crane during pick and carry operation. The slewing brake must be applied.
- The lifting capacity of the rooster sheave is the lifting capacity of the boom minus the mass of all attached hook, slings etc. to the boom, with an upper limit of 4,000kg.
  - [The hook for use with the rooster sheave is the 4 ton hook (mass: 60kg) with one part of line.]
- 10. If the boom length, boom angle, working radius and/or jib angle exceeds the rated value, use the lifting capacity for the rated value or for the next one, whichever gives the smaller lifting capacity.
- 11. In whatever working conditions the corresponding boom critical angel is shown in the chart. The crane can tip over if the boom is lowered below the critical angle even if unloaded.
  - Therefore, never lower the boom below these angles.
- 12. The standard parts of line for each boom length are as indicated in the chart. If you work with a non-standard number of parts of line, do not exceed 37.2kN (3.8tf) per wire rope respectively.
- 13. High-speed lowering operation should only be performed to allow descent of the hook alone. Avoid sudden lever operation.
- 14. Crane operation is permissible up to a wind speed of 10m/s. Even in relatively light wind conditions, extra care should be taken when handling loads presenting large wind catching areas
- 15. Kato bears no liability whatsoever for crane tipping or damage caused by crane operations with a load in excess of the lifting capacity or incorrect procedure.

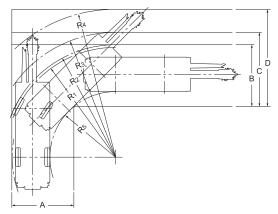

#### ■WORKING RANGE

## ■Minimum path width

#### Right turn in two-wheel steering mode

- A=4.63m (Width of entrance)

- B=4.63m (Width of wheel exit)

- C=5.57m (Width of chassis exit)

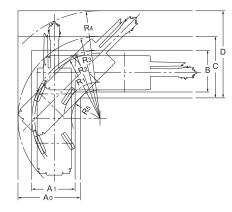

- (Minimum turning radius)
- R<sub>2</sub>=8.40m (Turning radius of extremely • D=7.28m (Width of exit at end of boom) outer tyre)
- R₃=9.35m

(Chassis turning radius)

- R<sub>4</sub>=11.07m
- (Boom end turning radius)
- R<sub>5</sub>=4.92m

(Turning radius extremely chassis inner)

#### ●Right turn in 4-wheel steering mode

- R₁=4.90m
- (Minimum turning radius)
- R<sub>2</sub>=5.10m (Turning radius of extremely outer tyre)
- R₃=6.17m (Chassis turning radius)
- R<sub>4</sub>=8.09m
- (Boom end turning radius)
- R<sub>5</sub>=2.10m

Note: The above values are based on calculations.

- A<sub>0</sub>=4.66m (Width of chassis entrance)

D =6.58m (Width of exit at end of boom)

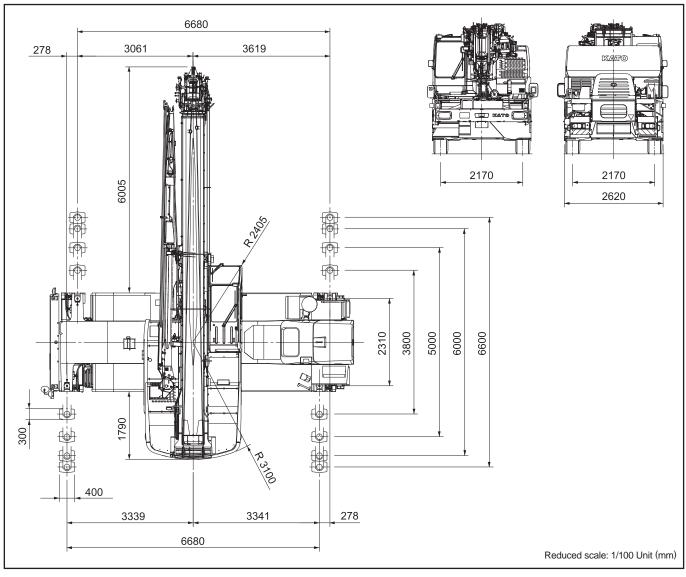

• A<sub>1</sub>=3.25m (Width of wheel entrance)

- B =3.25m (Width of wheel exit)

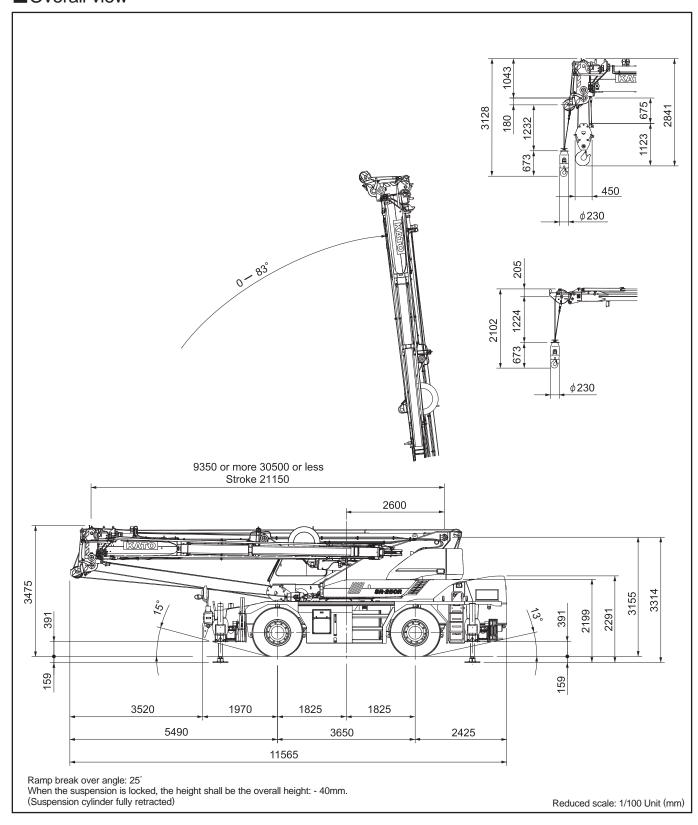

- C =4.66m (Width of chassis exit)

(Turning radius extremely chassis inner)
