**KOBELCO CK2000-II Main Boom Rated Loads in Pounds**

Counterweight: 132,280 lbs (60,000 kg)

Carbody weight: 44,100 lbs (20,000 kg)

Supplemental Data

- Rated loads included in the charts are the maximum allowable freely suspended loads at a given boom length, boom angle and load radius, and have been determined for the machine standing level on firm supporting surface under ideal operating conditions. The user must limit or de-rate rated loads to allow for adverse conditions (such as soft or uneven ground, out-of-level conditions, wind, side loads, pendulum action, jerking or sudden stopping of loads, inexperience of personnel, multiple machine lifts, and traveling with a load).
- Rated loads do not exceed 75% of minimum tipping loads. Rated loads based on factors other than machine stability such as structural competence are shown by asterisk * in the charts.
- The machine must be reeved and set-up as stated in the operation manual and all the instruction manuals if these manuals are missing, obtain replacements.
 - The crane must be leveled to within 1% on a firm supporting surface.
 - Boom backstops are required for all boom lengths.
 - Gantry must be fully raised position for all operations.
- Do not attempt to lift where no radius on load is listed as crane may tip or collapse.
- Attempting to lift more than rated loads may cause machine to tip or collapse. Do not tip machine to determine rated loads.
- Weight of hooks, hook blocks, slings and other lifting devices are a part of the total load. Their total weight must be subtracted from the rated load to obtain the weight that can be lifted.
- When lifting over boom point with jib or auxiliary sheave, rated loads for the boom must be deducted as shown below.

Jib Length	Aux. Sheave	30 ft	40 ft	50 ft	60 ft
Deduct (lbs)	1,250	7,055	8,010	8,965	9,920

- The total load that can be lifted by the jib is limited by rated jib loads.
- Boom lengths for jib mounting are 80 ft (24.4 m) to 240 ft (73.2 m).

- 40 ft (12.2 m) jib length with offset angle at 10 degrees, and one part of line on the hook is not allowed.
- Boom lengths that can attach auxiliary sheave are from 50 ft (15.2 m) to 270 ft (82.3 m).
- The boom should be erected over the front of the crawlers, not laterally.
- Least stable position is over the side.
- Maximum hoist load for number of reeving parts of line for hoist rope.
