Luffing Jib

Max. Luffing Jib Combination: 66m+66m

Performance

Toughness and luxury. Incredible manoeuvrability makes work efficiency leap ahead.

Lightweight, Solid Upper Frame

The upper frame has been newly designed to increase sectional strength and optimise the frame's stress capacity. This enhances rigidity and contributes to the crane's exceptional lifting capacity.

High-strength Lattice Boom, Ready for Hard Work

Large-diameter main pipe strengthens the boom to significantly boost lifting capabilities.

Double Motors for Smooth Travel

The crawler has double motors, one in front and one in the rear, delivering steady, powerful traction for smooth on-site travel.

Smooth Hoisting Increases Work Efficiency

Hoisting speed increases by approximately 30% ensuring faster, more efficient work.

Wide, Large-capacity Winches for Smooth High-rise Work

The wide hoist winches provide an impressive spooling capacity of 1,080m* of 28mm hoist rope. Their large capacity and large diameter prevent uneven spooling and wear while ensuring smooth operation during high-rise work with a long boom combination. *\$16000\$ figure.

Powerful Line Pull Winch Makes Tough Jobs Easy

With the efficient combination of a high-output engine and high performance hydraulic motors, the winches deliver plenty of line pull for single-line work. There's also ample capacity to get even the heaviest loads off the ground.

Rated Line Pull (Single Line) SL6000S, SL4500S Light Configuration $137kN\{14.0tf\}$ SL4500S $132kN\{13.5tf\}$

Adjustable HL Mast

With the adjustable HL mast, the rear swing radius can be set to one of three options* to suit work site conditions. This guarantees optimised lifting performance even on small sites. *Two options for SL4500S.

HL Spec. Max. Lifting Capacity Heavy Duty Crane Boom: $370t\times8.3m$ *sL6000s on Luffing Jib: SL6000s $200t\times14.4m$ Luffing Jib: SL4500s $113.5t\times16.0m$

Transport / Assembly / Disassembly

Light and easy. Innovation upon innovation for superior transportability.

Transportation Plans

Model	SL6000S	SL4500S	SL4500S Light Configuration		
Transport Weight	63,530 kg ** 44,310 kg *B	60,085 kg *c 45,000 kg *D	60,085 kg *C 45,000 kg *D		
Transportation Width	3,000 mm	2,990 mm	2,990 mm		

^{*}A,B,C,D, please refer to page 9

Kobelco's Lightweight Upper Frame

A new ultra-solid structure and top-quality high-tensile steel plate enable Kobelco to engineer and build a unique lightweight upper frame. So they're easier to transport than other conventional cranes in their class, not to mention simpler to assemble and disassemble.

Easy-to-transport Swing Cab

With plenty of room for the operator, the swing cab has a practical design for easy transportation. The cab swings away and stows in front of the base machine, reducing the transport width of the upper machine to just 3m.

New Crawler Frame

The crawler frame has the lower rollers fitted inside to increase sectional strength, and uses high-grade, high-tensile steel plate to minimise weight.

SL6000S only

Winches Mounted on Mast and Boom

The boom hoist winch is mounted on the mast, and the hoist winches are mounted on the boom base. This not only reduces the weight of the base machine, but also saves time labour, and money, because the boom and mast can be transported with winches attached.

*SL4500S: The boom hoist winch is mounted on the ba machine for crane operation and on the mast for

Attachment Transport / Disassembly Streamlined in 6 Big Ways

Steel bar pendant

NEW

NEW

The steel bar design is adopted to streamline assembly. It reduces rotation and misalignment during transport.

New counterweights

A newly designed counterweight allows

basket-rigging on the proper lifting rug provided

outside of the counterweight. It helps reduce rigging time and create stable lift handling when assembling and disassembling the counterweight.

Both the main winch and the reeving winch can be operated from inside the cab. Both winches have speed-adjusting trimmers that ensure

simple, accurate control of winding speed.

New reeving winch system NEW

Boom width: 3.0m

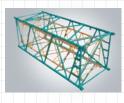

Specially designed boom fits in 3.0m width. SL4500S Light Configuration: 2.5m width

Wireless remote assembly controller

This standard feature also allows you to start the engine from outside the cab.

Nesting boom

The luffing insert jib can be easily nested in the insert boom by using the optional stowing guide rollers. This reduces the number of trailers needed for transport and minimises storage space requirements.

Sharing Booms Reduces Storage and Transportation Costs

The boom base and insert boom can both be used in crane boom, long boom, and luffing jib specifications. What's more, the long insert boom with long specifications, long upper boom, and luffing insert jib with luffing jib specifications, and luffing jib top can also be shared. This reduces costs and labour involved in changing specs, in storage, and in transport. Furthermore, as each insert is of the same diameter and thickness of pipe, they can be assembled in any order, and can also be transported.

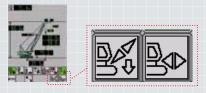

SHL Pallet Reduces Ground Pressure

The Super Heavy Lift (SHL) pallet weight is only 1.4kgf/cm², reducing the need for ground preparation work.

Enhanced Safety in Boom Assembly/Disassembly

The assembly/disassembly mode provided in M/L system enables assembly/disassembly without releasing the over-hoist prevention function. When the boom sets above a certain angle, assembly/disassembly is set to safe operation mode automatically.

Self-erection System Option

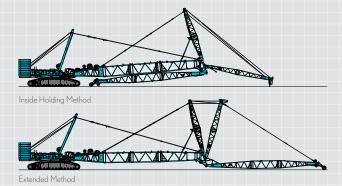

Use the built-in, remote controlled translifter (jack system) to lift the SL6000S and SL4500S clear of the trailer, then drive the trailer away. The self-assembly cylinder installed on the mast is used to install the crawler side frames and /or the boom.

SL4500S Can Be Used as a Light Configuration Crane, Too

SL4500S can be operated as a light configuration of the 300t class, which is quite often needed on site. The counterweights can be used as a standard 231t or as 151t light configuration, and the booms are 3.00m wide for the standard and 2.50m for the light configuration. This saves both transport cost and assembly time.

Choice of Methods for Assembly/Disassembly of Luffing Jib

Jib assembly is possible using either the extended or inside holding methods. On sites where space is available, the extended method is faster, but the inside holding method, in which the jib is folded under the boom, can be used for assembly/disassembly when site space is limited.

Quick Connection Device Option and Upper Translifter Option for Assembly to the Base Machine

When assembling or disassembling the upper and lower frames of the crane, the hydraulic quick connection device makes the process fast and accurate. In addition, by choosing the optional upper translifter for assembling to the machine, the crane can be assembled without an auxiliary crane.

Operation/Function/Equipment

Smooth and comfortable. Convenience and comfort extend to every corner.

New Cab Design Offers Excellent Operational Efficiency and Superior Interior Comfort.

NEW

- 1 More space inside
 - The cabin maximises comfort in operation and under way.
- 2 Wide front glass

The wide field of view makes for safer, more efficient operation.

3 New M/L monitor

One monitor provides a clear image for checking the angles that are difficult to see with the naked eye, improving operational safety. The angle can be adjusted freely for smooth visual checks and receipt of instructions.

4 Short lever

Easily-held grips fit the hand perfectly. SL6000S and SL4500S offer mobility, as well as instantaneous course changes and swing.

5 Cab entrance width increased from 565mm to 785mm

This makes entrance and exit much easier.

6 More foot room

The added space reduces fatigue and stress.

Overhead glass offering a clear view

Tough laminated glass overhead eliminates the need for a roof guard, expanding the operator's field of vision.

Better State-recognition

The operator can confirm the slant of the crane itself as well as the condition of all attachments. #SL60008 only

9 High-quality seat upholstery

The seat offers a feel of comfort and quality. Both the lever stand and seat are adjustable for comfort and ergonomics.

10 Fully trimmed interiors

The well-appointed interior enhances pride in workmanship.

Cab Tilt Function Makes High-rise Work Easier

The cab can be tilted back up to 15 degrees, increasing operator comfort doing high-elevation work.

^{*}Equipped with both wiper and boom

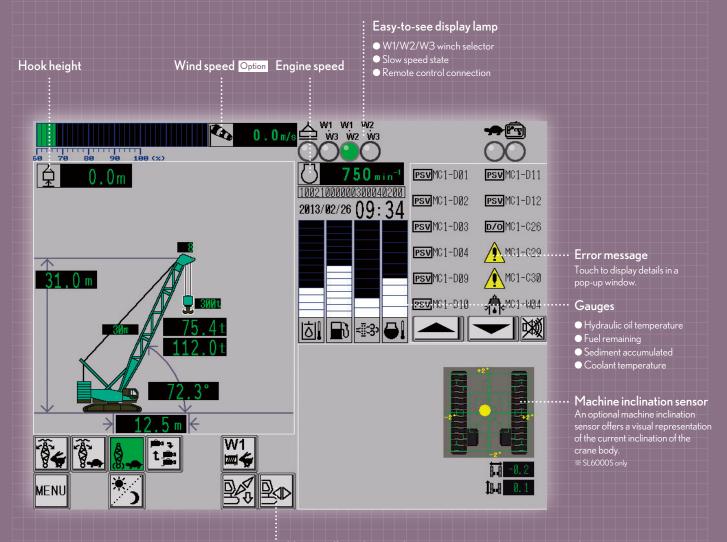

Clear Interface Design for **Smoother Operations**

The interface gathers all the important data and operational items into one compact space. The switch and gauge layout improvements in operating efficiency.

Universally understood pictograms provide intuitive visual recognition.

- Swing mode (free, high speed)
 Swing mode (free, low speed)
 Swing mode (braked, low speed)
- Camera switchesIndependent storageMenu
- Assembly/DisassemblyDPR manual operation

New Base Machine Layout for Easy Maintenance

The new layout on the base machine provides more space to access equipment for easier maintenance.

*Transporting an SL4500S

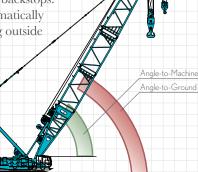

Dust-resistant Slew Bearing with Inside Teeth

The standard Kobelco inner-cut gear swing bearings resist dust penetration and hold grease better than outer-cut bearings.

Multi-stage System Prevents Boom Slew

With primary and secondary over-hoist prevention devices, this new safety system can prevent boom over-hoist at two stages. The primary stop function is activated when the boom or luffing boom approaches the critical angle-to-ground position during hoisting. This new system monitors the boom, luffing boom or jib angle-to-ground with a sensor, and immediately alerts the operator of any danger. Luffing boom angle-to-machine is also monitored. The secondary stop function uses a device that

The secondary stop function uses a device that monitors the angle-to-machine of the boom, luffing boom, or jib through a limit switch fitted to the boom and jib backstops. It stops the machine automatically to prevent it from working outside the safety range, and once activated it cannot be cancelled.

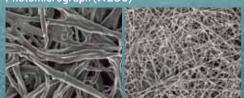

Environmental Performance

Exhaust levels equivalent to those specified under NRMM (Europe) Stage IIIA and/or US EPA Tier 3 regulations

Super-fine Filter, Long-life Filter for

Photomicrograph ($\times 250$)

Better State-recognition

Machine inclination* sensor and work area limit value ensure safe operations.

*SL6000S only

Industry-standard Automatic Stop Release Switch

Instead of a system of separate keys used to override automatic stop functions for over-load, hook over-hoist, and boom over-hoist, SL6000S and SL4500S employ a more reliable two-stage system of master key and individual switches. A single master key poses no

administrative difficulties, and prevents easy override of the automatic stop.

Automatic Soft-stop Function Reducing Shocks

The over-hoisting prevention device prevents the boom from lowering and the jib from hoisting, and softens automatic stopping when the boom is overloaded and swinging sideways.

Highly Acclaimed Safety Devices

- Warning buzzer to alert people in surrounding areas when the crane swings.
- A one-way call system ensures operator safety.
- Function lock lever prevents accidental operation.
- Crawler movement directional markings are clearly visible. • External alarms activate when the crane is moving or swinging. Option
- M/L external display lights inform people in the surrounding area of the crane's
- load state. Option
- Rear/main and aux. hoist drum/boom hoist state drum camera and monitor. Option
