| | | | | |

Transport dimensions and weights

Engine

Water cooled, V-8-cylinder Liebherr diesel engine, turbo charged with intercooler, model D 9408 TI-E, power rating according to ISO 9249, 340 kW (462 hp) at 1900 rpm.

Water cooled, V-12-cylinder Mecedes Benz diesel engine, turbo charged with intercooler, type OM 444 LA, power rating according to DIN ISO 3046 IFN, 448 kW (609 hp) at 1900 rpm.

The automatic limiting load control adapts perfectly the power of the main users to the present engine speed. The temperature and engine speed controlled cooling system saves energy and reduces the noise emission.

Fuel Tank: 920 l capacity with continuous level indicator and reserve warning.

Hydraulic System

The main pumps are operated by a distributor gearbox. Axial piston displacement pumps work in closed and open circuits supplying oil only when needed (flow control on demand). To minimize peak pressure an automatically working pressure cut off is integrated. This spares pumps and saves energy.

Winch 1 and 2: Axial piston displacement pumps (swash

plate design) with 500 l/min. each. Crawlers: Axial piston displacement pumps (swash plate design) with 2 x 396 l/min

Swing gear: Axial piston displacement pump (swash plate design) with 283 l/min.

Boom hoist: Axial piston displacement pump (swash plate design) with 200 l/min.

Max. working pressure: 350 bar

Hydraulic oil tank capacity: 1100 l The hydraulic oil is cleaned through electro– nically

controlled pressure and return filters.

Possible contamination is signaled in the cabin. The use of synthetic environmentally friendly oils is possible. Ready made hydraulic retrofit kits are available to customize requirements e. g. powering casing oscillators, auger drills etc.

Winches

Winch options: Line pull (nom. load)

Rope diameter: 26 mm 30 mm 34 mm Drum diameter: 550 mm 630 mm 750 mm Rope speed m/min 0-106 0-85 0-69 With change gear box 0-154 45.9 m Rope capacity 1st layer 46.5 m 46.5 m

160 kN

200 kN

250 kN

The winches are outstanding in their compact design and easy assembly

Propulsion is via a planetary gearbox in oil bath. Load support by the hydraulic system; additional safety factor pro vided by a spring loaded, multi-disc holding brake. Clutch and braking functions on the freefall system are pro-

vided by a compact designed, low wear and maintenance free multi-disc brake. The dragline and hoist winches use pres sure controlled, variable flow hydraulic motors. This system features sensors that automatically adjust oil flow to provide max. winch speed depending on load.

Working with 2 rope clamshell, the oil motors distribute the load to both winches providing speed compensation, even when working in different rope layers.

Crane winch 160 kN (16 t) - without clutch, but with multi- disc holding brake.

Noise emission

Special sound proofing results in a very low noise pressure level of 78 dB (A) at 16 m radius.

Equipment

Lattice boom of tubular construction up to 50 m, universal boom head with interchangeable rope pulleys. Modular designed equipment for operation as crane, dragline or

For dragline operation, a rotating fairlead is fitted into the boom foot, which minimizes rope angle to drum, which results in lower rope wear.

Swing Drive

Consists of single row ballbearing with external teeth for lower tooth flank pressure, fixed axial piston hydraulic motor, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion.

Free swing with hydraulic moment control reduces wear to a

minimum, because rotation moment is sustained through the hydraulic system by the diesel engine. A multi-disc holding brake acts automatically at zero swing motion. Swing speed from 0 - 3.7 rpm continuously variable.

Crawler

The track width of the undercarriage is changed hydrauli-

Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, maintenance free crawler tracks, hydraulic chain tensioning device. Flat or 3 - web track shoes. Drive speed 0 - 1.6 km/h.

2 speed hydraulic motor for higher travel speed.

Control

The control system - developed and manufactured by Liebherr - is designed to withstand extreme temperature and the many heavy-duty construction tasks for which this crane has been designed. Complete machine operating data are displayed on a high resolution monitor screen. To ensure clarity of the information on display, different levels of data are shown in enlarged lettering and symbols. Control and monitoring of the sensors are also handled by this high technology system. Error indications are automatically displayed on the monitor in English.

The crane is equipped with proportional control for all movements, which can be carried out simultaneously.

A special "Interlock" control system is also optionally avail-

able. It is designed for power lifting of the dragline bucket without using the grab winch brake.

An additional option is also the so-called "Redundant" control system, which allows restricted operation of the machine in the event of a failure on the electronic base control or its sensors.

On request, Liebherr also offers special custom designed control systems for free fall winches.

The crane is operated with 2 multi-directional joysticks. right for winch I and boom hoist drive, left for winch II and slewing gear. Crawler control is actuated with the two central foot pedals. Additionally, hand levers can be attached to the pedals.

Options:

- Both main winches with double-T levers
- Special demolition control system
- MDE: Machine data recording
- PDE: Process data recording

Boom hoist drive

Twin drum with internally located planetary gearbox, axial piston hydraulic motor and hydraulically released spring loaded multi-disc brake.

Max. line pull 2x 70 kN. Rope diameter: 20 mm

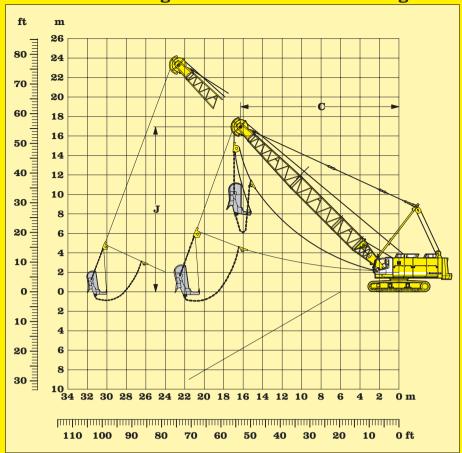

Max. line speed: 23 m/min.

Two speed boom hoist option

Technical description

19.6 t counterweight + 4.5 t add. counterweight

Scope of delivery:

- Basic machine with corresponding track shoes
- ding track shoes

 Add. counterweight 4.5 t
- Second swing drive with free swing
- A-frame
- Boom foot 4 m
- Boom extension 3 m tubular steel
- Boom extension 6 m tubular steel
- Boom extension 9 m tubular steel
- Boom head section 6.4 m
- Boom head with interchangeable pulleys
- Stay ropes according to boom length
- Main winches according to specification
- Drag rope should be 2 mm below nominal diameter
- Corresponding fair lead
- Corresponding ropes optional
- Dragline bucket optional

Clamshell equipment

19.6 t counterweight + 4.5 t add. counterweight

Scope of delivery:

- Basic machine with correspon-
- ding track shoes
 Add. counterweight 4.5 t
- A-frame
- Boom foot 4 m
- Boom extension 3 m tubular steel
- Boom extension 6 m tubular steel Boom extension 9 m tubular steel
- Boom head section 6.4 m
- Boom head with interchangeable pulleys

 Stay ropes according to boom
- length
- Main winches according to specification
- Corresponding ropes optional
- Hoist limit switch
- Load moment limitation
- Corresponding hook block optional

Remarks:

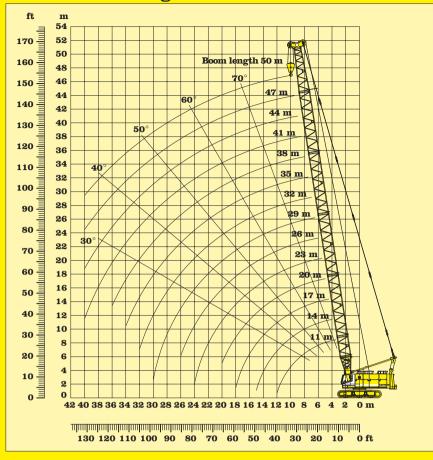

- 1. The lifting capacities are valid for wide track.
- 2. The lifting capacities stated do not
- exceed 75% of tipping load
 The lifting capacities are indicated
 in metric tons with unlimited
- swing (360 degrees)
 The weight of the lifting device must be deducted to arrive at the
- lifting capacity. Working radii are measured from centre of swing.
- 6. Crane standing on firm, horizontal
- 7. Indicated values on load chart are affected by off-lead operation, wind speeds, load under slew and stop/go movements.

Lifting capacity with multi sheave HD boom head

8099 445 14 - 01/98 Subject to change without notice.

19.6 t counterweight + 4.5 t add. counterweight

Scope of delivery:

- Basic machine with correspon
- ding track shoes
 Add. counterweight 4.5 t
- A-frame
- Boom foot 4 m
- Boom extension 3 m tubular steel Boom extension 6 m tubular steel
- Boom extension 9 m tubular steel
- Boom head section 6.4 m Boom head with interchangeable
- pulleys
 Stay ropes according to boom
- length
- Main winches according to specification
- Corresponding ropes optional
- Hoist limit switch Load moment limitation
- Corresponding hook block optional

Remarks:

- 1. The lifting capacities are valid for wide track.
- 2. The lifting capacities stated do not
- exceed 75% of tipping load
 The lifting capacities are indicated
 in metric tons with unlimited
 swing (360 degrees)
 The weight of the lifting device
- must be deducted to arrive at the lifting capacity.
- 5. Working radii are measured from centre of swing.6. Crane standing on firm, horizontal
- ground.
 7. Indicated values on load chart are
- affected by off-lead operation, wind speeds, load under slew and stop/go movements.
