- Remarks
1. The lifting capacities stated are valid for lifting operation only (corresponding with crane classification according to F.E.M. 1.001, crane group A1).
 2. Crane standing on firm, horizontal ground.
 3. The weight of the lifting device (hoisting ropes, hook block, shackle etc.) must be deducted from the gross lifting capacity to obtain a net lifting value.
 4. Additional equipment on boom (e.g. boom walkways, auxiliary jib) must be deducted to get the net lifting capacity.
 5. For max. wind speed please refer to lift chart in operator's cab or manual.
 6. Working radii are measured from center of swing and under load.
 7. The lifting capacities are valid for 360 degrees of swing.
 8. Calculation of stability under load is based on ISO 4305 Table 1 + 2, tipping angle 4°.
 9. The structures are calculated according to F.E.M. 1.001 - 1998 (EN 13001-2 / 2004).

Technical description

Engine

Power rating according to ISO 3046, 670 kW (898 hp) at 1900 rpm
Engine type _____ MAN D 2842 LE
Fuel tank _____ 950 l capacity with continuous level
_____ indicator and reserve warning
Engine complies with NRMM exhaust certification EPA / CARB Tier 2.

Hydraulic system

The main pumps are operated by a distributor gearbox. Axial piston displacement pumps work in closed and open circuits supplying oil only when needed (flow control on demand). To minimize peak pressure an automatically working pressure cut-off is integrated. This spares pumps and saves energy. The hydraulic oil is cleaned through electronically controlled pressure and return filters. Possible contamination is signaled in the cabin. The use of synthetic environmentally friendly oils is possible. Ready made hydraulic retrofit kits are available to customize requirements e.g. powering casing oscillators, VM-vibrators, hydraulic grabs, fixed leaders etc.
Working pressure _____ max. 350 bar
Oil tank capacity _____ 1360 l

Boom winch

Line pull _____ max. 150 kN
Rope diameter _____ 24 mm
Boom up _____ 160 sec. from 15° to 86°

Swing

Consists of rollerbearing with external teeth for lower tooth flank pressure, fixed axial piston hydraulic motor, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion. Swing speed from 0 – 3.6 rpm continuously variable, selector for 3 speed ranges to increase swing precision.
Standard:
Second swing drive
Option:
Third swing drive

Noise emission

Noise emissions correspond with 2000/14/EC directive on noise emission by equipment used outdoors.

Main winches

Winch options:
Line pull (nom. load) _____ 350 kN
Rope diameter _____ 36 mm
Drum diameter _____ 830 mm
Rope speed _____ 0-77 m/min
With change gear box _____ 0-157 m/min
Rope capacity 1st layer _____ 46.9 m

The winches are outstanding in their compact design and easy assembly. Clutch and braking functions on the free-fall system are provided by a compact designed, low wear and maintenance-free multi-disc brake.

The drag and hoist winches use pressure controlled, variable flow hydraulic motors. This system features sensors that automatically adjust oil flow to provide max. winch speed depending on load.

Option:
Auxiliary winch _____ 70 kN in boom foot
Tagline winch _____ 70 kN with free fall
_____ 30 kN with free fall

Crawlers

The track width of the undercarriage is changed hydraulically. Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, maintenance-free crawler tracks, hydraulic chain tensioning device.

Track pads _____ 1100 mm
Drive speed (2-speed hydraulic motor) _____ 1st gear 0.75 km/h
_____ 2nd gear 1.40 km/h

Option:
• Jack-up system
• Self-assembly system

Control

The control system – developed and manufactured by Liebherr – is designed to withstand extreme temperature changes and the rough heavy duty tasks common in the construction industry. Complete machine operating data are shown on a high resolution display. The crane is equipped with proportional control for all movements, which can be carried out simultaneously.

Dragline operation: A special "Interlock" control system is an option available. It is designed for power lifting of the dragline bucket without using the drag winch brake.

On request, Liebherr also offers special custom designed control systems for free fall winches.

Operation: Left joy stick for boom winch and swing, right two directional levers for winch I and II. Crawler control is actuated with the two central foot pedals. Additionally, hand levers can be attached to the pedals.

Options:
• Special demolition control system
• MDE: Machine data recording
• PDE: Process data recording
• GSM modem

Rope diameter	mm	36
Minimum breaking load	kN	1186
Line pull - 1-rope duty cycle operation	t	30
Line pull - 2-rope duty cycle operation ¹⁾	t	49.2

- 1)

Lifting a load exceeding the line pull of one winch is only allowed if it can be ensured that each individual winch is not overloaded. When working with a mechanical 2-rope grab the total load to be lifted is limited by the line pull of one winch. Rigging and ropes are part of the load.
- 2)

Max. capacities in metric tons do not exceed 75% of tipping load. Crane standing on firm, horizontal ground.

Capacities in duty cycle operation are for reference only and are not programmed in the LMI system.
All loads and counterweight configurations are max. values and must not be exceeded.
Weight of additional equipment on boom (e.g. walkways, hose drums etc.) must be deducted to get the net capacity.
