Front drum is under-winding; rear drum is over-winding; third drum is under-winding. Line pull and speed are based on engine full load speed. For combination crane-clamshell or crane-dragline, the rear drum is furnished with 151/4" diameter lagging. Only smooth laggings are interchangeable. On dragline operation, you must remove all cable from the third drum to prevent interference of inhaul rope with third drum brake. On lifting crane (front drum), to prevent interference of hoist line with third drum brake enclosure, quantity of line on front drum must be limited in certain cases.

# HC-108B CAPACITIES WITH TUBULAR BOOM

PCSA Class 10-245
Refer to ALL notes on page 3

Capacities are based on machine equipped with retractable high gantry (fully raised),  $8 \times 4$  drive carrier, 11'0'' wide,  $14:00 \times 20$ , 18-ply rating tires, front and rear power hydraulic outriggers.

# NOTES

### Carrier - Capacities

 The carrier manufacturer certifies that this carrier has strength and stability equal to or greater than that required for the above lifting capacities and must not be exceeded.

### Lifting Crane

- 1. For lifting 90,000 lbs., with 3/4" hoist rope, seven parts of line required.
- All capacities are limited by strength and based on machine standing on firm, level ground. A deduction must be made from the capacities for weight of hook block, hook, sling, grapple, etc.
- 3. For tubular boom lengths exceeding 130', the boom mast with mid-point suspension pendants is required. When boom mast is used as a short boom, maximum lifting capacity is 26,000 lbs. from 9'-5" minimum to 20' maximum radius.

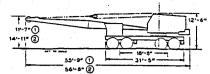

### Dragline, clamshell and magnet

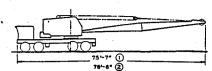

- Dragline capacities are equal to 90% of the "On Tires Over Side" with counterweight "A" lifting crane capacities except limited to a maximum of 11,800 pounds.
- Clamshell and magnet capacities are equal to 80% of the "On Tires — Over Side" with counterweight "A" lifting crane capacities except limited to a maximum of 13,600 pounds.
- All dragline, clamshell and magnet capacities are for ideal job conditions. The user must make allowances for rapid cycle operation, soft, or uneven supporting surfaces, etc.
- Dragline, clamshell, and magnet capacities include weight of bucket or magnet plus load.
- 5. Boom length should not exceed 60 feet.

\*40' jib at 30° off centerline of boom not recommended for booms over 130'

\*\*50' jib at 30° off centerline of boom not recommended

\*\*50' jib at 15° off centerline of boom not recommended for booms over 130'

- 1. Capacities shown are in pounds and are based on Link-Belt Speeder jibs. Jib cross-section: Angle, 22<sup>3</sup>/4" wide by 18" deep (bolted). Tube, 24" wide by 24" deep (bolted) or 24" wide by 18" deep (pin connected). Use jibs with a 10'0" high jib mast in the proper working position.
- 2. To determine jib angle to ground, deduct jib angle to boom from the boom angle to ground.
- 3. The jib backstay line (A) is anchored to the boom upper section.
- 4. The jib angle to boom must not exceed 30°.
- 5. Determining machine jib capacities:
  - a. Add the length of boom plus length of jib used.

b. Determine the jib load radius.

c. Refer to the lifting crane capacity chart and select the boom

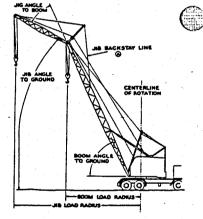

An almost to the control of the cont

length that corresponds to the total length of boom and jib in (A) and the radius in (B).

(1) The jib capacity is equal to the lifting crane capacity unless restricted by the maximum jib capacities shown above.

d. If the total length of boom and jib exceeds the longest boom length listed in the lifting chart, deduct 300 lbs. from the angle and 200 lbs. from the tube capacity shown for the longest boom length for the radius required in (B).

(1) The jib capacity is the resulting figure unless restricted by the maximum jib capacities shown above.

- 6. Determining lifting crane capacities with jib on the boom:
  - a. When operating off the main boompeak sheaves with a jib on the boom, the following reductions in machine lifting capacities must be made:

(3) 40' jib .... 2,200 lbs.

(1) 20' jib .... 1,600 lbs. (2) 30' jib .... 1,900 lbs.

(4) 50' jib .... 2,500 lbs.

# MAXIMUM BOOM-JIB MACHINE CAN LIFT OFF **GROUND UNASSISTED**

\*Reduced travel speeds are recommended with long booms; safe speeds depend on road conditions. <sup>2</sup>With bumper counterweight installed.

# **GENERAL SPECIFICATIONS**

ARRIER (8x4; Crane Carrier Corp.)

FRAME — Box section, high alloy, wide flange beam main members.

FRONT AXLES — Tandem, bogie beam mounted, Shuler Model FTKA tubular; 100" track.

**REAR AXLES** — Clark planetary Model BD50-70 double reduction, bogie beam mounted; 90" track.

WHEELS AND RIMS — Cast spoke type; integral with planetary hub; 10.00" x 20" diameter rims.

TIRES — Single tires front, dual tires rear.

Standard — 14:00 x 20, 18-ply rating, non-directional tread.

Optional — 14:00 x 20, 18-ply rating, rock type tread. OUTRIGGERS — Full width, double-box front and rear, pin connected to carrier frame, hydraulically operated beam and jack cylinders are individually controlled from the ground. Check valve at each jack cylinder. Pontoons are alloy steel lightweight.

BRAKES - (Air)

Service — Eight-wheel air brakes standard. MAXI-BRAKE on rear wheels, and single diaphram air chambers on front wheels. Internal expanding.

Size and Area —

**Rear Wheels** —  $16^{1}/_{2} \times 7''$ , total effective lining area 868 sq. in.

Front Wheels —  $17^{1}/4'' \times 4''$ , total effective lining area 500 sq. in.

Digging — Eight-wheel service brake applied with air valve on carrier dash.

Parking — Four-wheel rear brakes applied with air valve on carrier dash.

Emergency — Brakes on four rear wheels apply when air pressure drops below 40-60 p.s.i. in the system. Emergency brake may be manually applied at any time by hand control of dash mounted air valve.

STEERING — Power hydraulic, Ross Model TE-71; 21" diameter wheel.

TURNING RADIUS — 58' 6" over outside of front bumper. ENGINES — Diesel, 12-volt alternator or generator, starter, pressure lubrication, radiator, air cleaner, 12 c.f.m. air compressor, hydraulic pump.

Standard — GM 6-71 diesel engine, six cylinder, two cycle, 41/4" bore, 5" stroke, 425.6 cu. in displacement, 238 maximum brake horsepower at 2,100 r.p.m. full load speed. Peak torque 649 ft. lbs. at 1,400 r.p.m. Optional — Cummins NH-230 diesel engine, six cylinder, four cycle, 51/2" bore, 6" stroke, 855 cu. in. displacement, 230 maximum brake horsepower at 2,100 r.p.m. full load speed. Peak torque 638 ft. lbs. at 1,500 r.p.m.

CLUTCH - Lipe Rollway, 14" 2-plate.

TRANSMISSIONS -

Main — Fuller 5H740 with five speeds forward and one reverse.

Auxiliary — Fuller 3F92 3-speed.

UNIVERSALS — Mechanics needle bearing type.

CAB — One-man, fully enclosed.

**ELECTRICAL SYSTEM** — 12-volt system, including sealed beam headlights, directional signals, lighting of instrument panel, and headlight dimmer switch.

WEIGHT — Carrier with hydraulic outriggers, 8 x 4 drive, ring gear, front bumper ctwt., approximately 49,510 lbs.

STANDARD EQUIPMENT — Bus-type rear view mirrors, front tow hooks, lug wrench, tire gauge, and tire inflation hose. Instrument panel and dash includes speedometer, ammeter, fuel gauge, engine temperature gauge, air pressur gauge, oil pressure gauge, low air pressure warning buzzer, ignition switch, starter button, choke control, and hand throttle to supplement foot accelerator, a two-way reading bubble level, and windshield washer. High-pressure lube fittings at all bearing points; 60-gal. fuel tank mounted on right side of frame. Front bumper ctwt. Heater and defroster.

SPEEDS — TRANSMISSION RATIOS. All speeds given are for HC-108B with 14:00 x 20 tires and engines at governed full load speed. Speeds will vary with optional tires.

### **UPPER**

**UPPER FRAME** — All-welded, stress-relieved, precision machine unit. Side housings bolted to upper frame.

TURNTABLE ROLLERS — Eight adjustable, heat-treated, conical, hook-type rollers mounted on tapered roller bearings. Two equalized pairs mounted both front and rear.

PANSMISSION — Link-Belt quadruple roller chain enosed in oil-tight chain case with integral sump. Pumpdriven oil stream lubrication. Engine pinion and chain wheel have machine-cut teeth.

**REDUCTION SHAFT** — Two piece shaft, joined by an involute splined coupling mounted in side housings on antifriction bearings.

Two Drive Pinions — Heat-treated, machine-cut teeth involute splined to reduction shaft. Pinions mounted outside side housings.

CLUTCHES — Speed-o-Matic power hydraulic actuated for swing, operating drums, boomhoist and optional load lowering. Internal expanding two-shoe type, aluminum alloy shoes; 20" diameter, 5" face width. Third operating drum clutch 17\(^1/4\)" diameter, 4" face width. Load lowering clutches not available with gear-driven two-speed hoist or auxiliary, two-shoe rear drum brake.

Spiders — Involute splined to horizontal shafts.

DRUMS — Front, rear, and third operating (optional) drums.
 Shafts — Mounted in line bores on anti-friction bearings. Front and rear drum shafts only extended to

accommodate optional load lowering clutches. Special shaft required to accommodate two-speed, planetary-driven drums.

Spur Gears - Machine-cut teeth; mounted on antifriction bearings on shaft.

Clutch Drums - Bolted to spur gears.

Brakes — Two-piece, external contracting band, mechanically foot pedal operated, front and rear drum 27" diameter 4" face width, third drum 18" diameter 3" face width.

Brake Drums — Involute splined to drum shaft.

Drum Laggings - Two-piece, removable; bolted to

DRUM ROTATION INDICATOR (Optional) - Mounted on control stand. Dial actuated by flexible shaft from front and rear main operating drum shafts.

TWO-SPEED FRONT AND REAR DRUMS (Optional) -Gear-driven, hoist only - Intermediate gears in stalled in side housings convert two-shoe load lowering clutches to high-speed hoist clutches; hoist rope speed increased 100% over standard speeds. Planetary-driven, hoist and lowering — Planetary unit mounts between spur gear and two-shoe clutch drum on extended shaft; available for 70% increase or 40% decrease of standard hoist and load lowering rope speeds. Not available for front drum rope lowering. Two-shoe clutch gives standard speed. Planetary controlled by external contracting band through push-button located on clutch control lever.

AUXILIARY TWO-SHOE REAR DRUM BRAKE (Optional)-

Increases brake lining contact area by 212 sq. in. Pressure on mechanical brake pedal applies the standard rear drum brake band and the auxiliary twoshoe brake simultaneously. Mechanical linkage actuates the control mechanism of a variable pressure valve to direct hydraulic pressure to the brake cylinder. Lowering clutch, two-speed gear-driven hoist, or two-speed planetary drive unit on lowering side of rear drum not available. Internal expanding two-shoe Speed-o-Matic power hydraulic brake, 20" diameter 5" face, brake spider involute splined to shaft, and brake drum bolted to anchor plate on machinery side housing.

HORIZONTAL SWING SHAFT — Mounted in line bore on anti-friction bearings.

Spur Gears - Machine-cut teeth. Mounted on shaft on anti-friction bearings.

Bevel Gear — Involute splined to shaft, fully enclosed and running in oil.

INDEPENDENT BOOMHOIST — Spur gear driven with precision boom raising and lowering through a clutch. A rope drum locking pawl, manually controlled from operator's position, is provided.

Shaft — Mounted in line bore on anti-friction bearings. Spur Gears - Machine-cut teeth mounted on antifriction bearings on shaft.

Rope and Brake Drum — Involute splined to shaft. Ratchet wheel and 22" diameter 31/4" face width

brake drum are cast integral.

Brake — External contracting band, 22" diameter 3" face width, spring applied and power hydraulically released.

BOOMHOIST LEVER KICK-OUT DEVICE - Special mechanism activated by boom at minimum radius "kicks out" boomhoist lever and disengages boom raising clutch. Boom must then be lowered before it can be raised again.

VERTICAL SWING SHAFT — Mounted in line bore on anti-friction bearings.

Bevel Gear - Involute splined to shaft; fully enclosed and running in oil.

Swing Pinion — Involute splined to shaft; teeth mesh with internal teeth of ring gear.

Swing Brake — Two-directional, external contracting band; spring-applied and power hydraulically released. Brake Drum — Involute splined to swing shaft.

SWING LOCK — Mechanically controlled pawl engages with internal teeth of ring gear.

SWING SPEED - 4 r.p.m.

GANTRY - Retractable - Mounted to upper to support bail, boom suspension system and two boomhoist rope sheaves. Used with all booms. For tubular booms over 130' boom mast is required. Also used for power lowering of counterweight in conjunction with boom lowering clutch.

Bail - Pinned to gantry frame. Contains three sheaves with bronze bushings for 8-part boomhoist with angle boom and four sheaves with anti-friction bearings for 10-part boomhoist with tubular boom; additional sheaves furnished for increased parts of line.

Speed-o-Matic Gantry Jack (Optional) -- For power hydraulic raising and lowering of retractable high gantry. Controlled from rear of cab.

CAB - Operator's door, rear doors, and front window slide on ball bearing rollers. Full-vision operator's compartment with safety glass panels. Cat-walks on operator's side optional. Heater and defroster optional.

Elevated Operator Cabs (Optional) — Two or four ft. available. Upper portion of 4' cab is hinged and equipped with quick disconnect fittings for easy re-

moval of reduce overall height.

COUNTERWEIGHTS — Removable and held in position by "T"-bolts. Power raising and lowering with boomhoist clutches through retractable high gantry. Optional power hydraulic cylinder suspended between high gantry backstays to raise or lower counterweight.

Ctwt. "A" — Recommended for dragline, clamshell-

magnet operation.

Ctwt. "AB" — One-piece is standard for lifting crane. Two-piece is optional, allowing for counterweight reduction to weight "A"

19,200 lb. ctwt. ("AB") 13,000 lb. ctwt. ("A") 6,200 lb. ctwt. ("B") 18,400 lb. ctwt. ("AB") 12,200 lb. ctwt. ("AB")

Waukesha 135GZU Cummins N495 GM 4030N & 4082

Waukesha F-554-G

Cateroillar D-333C-T

6,200 lb. ctwt. ("B") **CONTROL SYSTEM** — Speed-o-Matic power hydraulics; an open system. Operating pressure is transmitted through oil to all operating two-shoe clutch cylinders, swing brake and boomhoist drum brake cylinders. The system includes a pump to provide a constant flow of oil, an accumulator to maintain operating pressure and variable pressure operator-controlled valves to regulate this pressure to each clutch cylinder.

Pump — Vickers; rated at 4.7 g.p.m. at 1,200 r.p.m. Oil Filter - Link-Belt Speeder; replaceable Skinner

ribbon-type filter element.

Relief Valve - Link-Belt Speeder; set to operate at 1,250 p.s.i.

Unloader Valve - Link-Belt Speeder; set to unload pump at a maximum 1,050 p.s.i. and to load pump when pressure drops below 900 p.s.i.

Accumulator — Link-Belt Speeder; piston-type, pre-

charged with nitrogen gas to 650 p.s.i.

Sump Tank — Link-Belt Speeder; 7 gal. capacity with filter and strainer assembly.

Control Valves - Link-Belt Speeder; variable pressure type.

ENGINES - Full pressure lubrication, oil filter, air cleaner, hour meter, hand and foot throttles, 60-gal. capacity fuel tank with fuel gauge.

(1) Two-speed Cotta transmission available for lifting crane service; reduces operating speeds approximately 50%.

(2) 2.5 ratio Allison TCOA-377-119 converter. Single stage. (3) 3.4 ratio Torqmatic TDCOA 435 Converter. Singel stage.

Two 6-volt with friction clutch; one 12-volt with hydraulic coupling or two-speed Cotta transmission.

### FRONT END CRANE BOOM EQUIPMENT

ANGLE BOOM - Two-piece 40' total length, 20' upper and lower sections: 34" deep and 34" wide at connections. Chord angles, alloy steel. Lower section  $3^1/2^n \times 3^1/2^n \times 3^1/2^$ 

Boomfoot —  $1^5/8''$  wide on 38'' centers.

Boompoint Machinery - Three 18" root diameter sheaves mounted on anti-friction bearings on boompeak shaft. Two or four sheaves, or one wide-mouth sheave for dragline, optional.

Pin Connections - Permit easy removal and addition of extensions.

BOOM EXTENSIONS — Available in 5', 10' and 20' lengths with proper length pendants.

BOOM BACKSTOPS - Dual, rigid type with spring-loaded bumpers.

**BOOMHOIST BRIDLE** — Serves as a connection between the pendants and live boomhoist rope. Bridle contains five, or six  $9^1/2^n$  root diameter sheaves mounted on nonmetallic bushings for 10-part boomhoist, and bronze bushings for 12-part boomhoist.

JIB — 20' two-piece with 10' upper and lower sections; 10' extensions available for 30' or 40' jib. Jib is 23" wide and 18" deep at the connections; chord angles, lower section 2" x 2" x 1/4", upper section and extensions 2" x '. Jib and extensions are bolted.

Jib Mast — 10' high, mounted on jib base section; two deflector sheaves mounted on needle bearings for jib hoist line with in the mast; two equalizer sheaves for jib front stay and jib backstay lines mounted to top of mast.

Jib Backstop — Wire rope type.

Peak Sheave — Mounted on anti-friction bearings. Peak Shaft — Anchor is provided at peak of jib for two-part jib hoist line. Jib stay line anchors are suspended from shaft.

"HI-LITE" TUBULAR BOOM - Two-piece 40' total length, 20' upper and lower sections, 44" deep and 44" wide at connections. Square tube chords, alloy steel, 21/4" with bracing of round steel tubing.

Boomfoot — 21/4" wide on 50" centers.

Boomfoot Adapter — Required to adapt 38" centers of revolving frame boomfoot lugs to 50" centers of tubular boomfeet.

Boompoint Machinery — Three 18" root diameter sheaves mounted on anti-friction bearings on boompeak shaft. Two and four sheaves optional.

Pin Connections - Permit easy removal and additions of extensions.

BOOM EXTENSIONS - Available in 10', 15', and 20' lengths with proper length pendants.

BOOM BACKSTOPS — Dual, telescoping; spring cushioned.

BOOMHOIST BRIDLE -- Serves as a connection between the pendants and live boomhoist rope. Bridle contains 12"

root diameter sheaves mounted on anti-friction bearings. Without Boom Mast -- Five sheaves for 10-part boomhoist and six sheaves for 12-part boomhoist.

With Boom Mast — Connected to gantry by a shaft. Six sheaves for 12-part boomhoist; also contains two 91/2" diameter sheaves mounted on non-metallic bushings enable mast to be used as a short boom.

BOOM MAST — Mounted on boomfoot adapter, supports boomhoist bridle and mid-point suspension pendants. Boom mast and mid-point boom suspension pendants required for all main boom lengths over 130'. Boom mast retracts to 20' for use as a short boom. Hydraulic extending cylinders optional.

JIB — Bolted or pin-connected, two-piece with 10' upper and lower sections, 10' extensions available for 30', 40'.

Bolted - 24" wide and 24" deep at connections.

Tubular chords, alloy steel, 11/2" diameter.

Pin-connected — 24" wide and 18" deep at connections, tubular chords, alloy steel, 11/4" diameter.

Jib Mast — 10' high, mounted on jib base section. Two deflector sheaves mounted on anti-friction bearings for jib hoist line within the mast. Two equalizer sheaves for jib frontstay and jib backstay lines mounted to top of mast.

Jib Backstop — Wire rope type.

Peak Sheaves — Mount on anti-friction bearings. Peak Shaft - Anchor is provided at peak of jib for two-part jib hoist line. Jib frontstay line anchors are suspended from shaft.

FAIRLEADER - Full-revolving type with barrel, sheaves and quide rollers mounted on anti-friction bearings.

TAGLINE WINDER - Rud-O-Matic Model 648; springwound drum type mounted on crane boom. Cable pull off drum — 60' to 75' from neutral.

BOOM ANGLE INDICATOR - Mounted on boom near base.

ROPE SUPPORTING ROLLERS — To deflect main hoist line over top of boom. Required when third drum rope passes over crane boom. Rollers mounted on anti-friction bearings, following numbers recommended:

Angle Boom — One through 45'; two through 65'; three through 85'; four through 100'.

Tubular Boom — One supplied as standard; two through 125'; three through 145'; four through 150'. BOOM FOLDING EQUIPMENT (Optional) — To facilitate folding of pin-connected booms. Two folding links plus shorter pendants are inserted in boomhoist reeving. Eliminates need for "breaking" boomhoist reeving to fold boom.

Angle Boom — Extended head shaft for mounting of two 7:20 x 20, 8-ply rating heavy-duty express tires

mounted on wheels. Tubular "Hi-Lite" Boom — Two 4:00 x 18, 4-ply rating, grooved implement tires with spoked wheels mounted within a strut pinned to boom for folding.

### *VIRE ROPE*—

### PE AND SIZE USED

Live Boomhoist — Type "A",  $\frac{5}{8}$ " dia.,  $\frac{3}{4}$ " dia.; Type "F",  $\frac{5}{8}$ " dia.,  $\frac{3}{4}$ " dia. Main hoist — Type "A",  $\frac{3}{4}$ " dia.

Jib Hoistline — Type "K", 5/8" dia. Dragline hoist — Type "A", 3/4" dia.

Dragline inhaul - Type "D", 7/8" dia.

Clamshell holding — Type "A", 3/4" dia. Clamshell closing — Type "A", 3/4" dia.

Tagline — Type "A",  $\frac{7}{8}$ " dia.

Jib staylines — Type "A",  $\frac{5}{8}$ " dia.; Type "F",  $\frac{5}{8}$ " dia.

Boom pendants — Type "N",  $\frac{1}{4}$ " dia.

Mid-point suspension pendants (Boom mast) — Type "C", 1" dia.

### WIRE ROPE TYPES

Type "A" — 6 x 25 (6 x 19 class), filler wire, improved plow steel, preformed, fiber center, right lay, regular

Type "C" — 6 x 25 (6 x 19 class) filler wire, improved plow steel, preformed, independent wire rope center,

right lay, regular lay.

Type "D" — 6 x 25 (6 x 19 class), filler wire, improved plow steel, preformed, independent wire rope center, right lay, lang lay.

Type "F" — 6 x 25 (6 x 19 class), filler wire, improved

plow steel, preformed, independent wire rope center.

right lay, regular lay.

Type "K" — 18 x 7 non-rotating, improved plow steel,

fiber center.

Type "N" — 6 x 25 (6 x 19 class) filler wire, extra-high tensile strength steel, preformed, independent wire rope center, right lay, regular lay.

### JIB MAST STAYLINES

### ANGLE JIB

Backstay - For all boom lengths, 51' long. Rope length adjusted to fix jib angle to boom. Frontstay — For all booms with 20' jib, 48' long; with

30' jib, 70'; with 40' jib, 100'.

### TUBULAR JIB

Bolted connections, backstay — 45'33/4" long (40'113/4" plus two each 2'2" long) for 30° jib to boom angle; removal of 2'2" lengths allow 15° and in-line jib-to-boom angle.

Frontstay — For all booms with 20' jib, 55' long; with 30' jib, 75'; with 40' jib, 95'; with 50' jib, 115'.

Pin connections, backstay — 52' 5" long (43' 9" plus two each 4' 4" long) for 30° jib to boom angle: removal of 4' 4" lengths allow 15° and in-line jib to boom angle. Frontstay - 20' jib basic pendant 43'9" long. Two pendants 9'6" long supplied with each 10' jib ex-
