General dimensions	feet	meters
Overall width, outiggers extended, (over floats)	23' 6"	7.16
Overall width, outiggers extended, (c/l of jacks)	21' 0"	6.40
Overall width, outiggers retracted	11' 0"	3.35
Vehicle clearance circle over outside of front bumper	104' 2"	31.73
Vehicle clearance circle over outside of front bumper counterweight	105' 10"	32.25
Minimum ground clearance (at bottom of front bogie beams)	11"	.28
Counterweight tailswing (at corners)	15' 11"	4.85
Overall cab width (upper)	11' 0"	3.35
Radius of boom hinge pin	35'-7/16"	.90
Height of boom hinge pin	6' 9"	1.98
Ground clearance under counterweight	5' 2"	1.58

GENERAL INFORMATION ONLY

**Axle Loads — Calculated**

Based on standard HC-228H revolving upperstructure equipped with Isuzu engine, power load lowering on front and rear load hoist drums, no counterweight, mounted on 260" (6.60 m) wheelbase, 8 x 4 drive carrier, 11' 0" (3.35 m) wide, equipped with DD 8V-92 TAC DDEC diesel engine, front center hydraulic jack, and full fuel. GENERAL INFORMATION ONLY

Carrier

■ Type

260" (6.60 m) wheelbase, 8 x 4 drive.
11' 0" (3.35 m) wide.

Frame — Main members heat treated alloy steel, triple-box construction. Machined mounting surface for turntable bearing. Towing shackles front and rear.

Turntable bearing — Inner race, with integral internal tooth swing (ring) gear, bolted to machined surface on carrier deck.

■ Outriggers

Full width, double box, front and rear pin connected to carrier frame. Hydraulically operated beams and jack cylinders individually controlled from each side of carrier. Hydraulic power supplied by belt-driven hydraulic pump. Check valve at each jack cylinder.

Optional - Hydraulic outrigger box pin puller.

■ Front center hydraulic jack with float

Standard- Single hydraulic jack, with float, mounted at front of the carrier. Jack/float assembly required for handling 360° swing and capacities.

Floats — Low profile, alloy steel; 30" (0.76 m) square base.

Trailer hitch — *Optional* - Includes air and electric connections at rear of carrier for trailer lights and air brakes.

■ Axles

Front- Tubular; bogie beam mounted tandem axles, single wheels. 105" (2.67 m) track.

Rear- Planetary type, bogie mounted tandem axles, dual wheels. 100" (2.54 m) track.

Suspension — Hendrickson rubber bushed front and bronze bushed rear equalizer beams with rubber bushed torque rods.

Wheels and rims — Front; disc-type. Rear, integral with planetary hubs.

Tag axle — *Optional* - Consult factory.

■ Tires

Single tires on front axles, dual tires on rear axles.

Standard — Front - 14.0 x 24J (18-ply rating) transport type tread.

Rear - 14.0 x 24L (20-ply rating) transport type tread.

Optional - Consult factory.

■ Brakes

■ Air brake system

Service — Dual circuit with modulated emergency brakes. Bendix dual circuit 8 wheel air brakes with service chambers on 4 front wheels and spring applied, air released emergency, parking, service chambers on 4 rear wheels. Air dryer standard.

■ Size

Rear wheels; 20-1/4" x 7" (0.51 x 0.18 m)

Front wheels; 16-1/2" x 6" (0.42 x 0.15 m)

Steering — Sheppard full integral hydraulic power with one master gear, one slave gear and one hydraulic pump for each axle. Steering mounted high on side of frame to minimize exposure to hazards. Separate master and slave for each axle eliminates transfer of steering force from entire system into one axle which could overload and damage linkage. Steering wheel is mechanically connected to axles to allow steering (with increased steering input effort) in the event of hydraulic system failure. Multiple pumps minimize possibility of total hydraulic system failure and only require increase in steering input effort sufficient to compensate for that portion of system that failed. High speed, high power system to maximize maneuverability both on the job site and on the road.

■ Engines

Diesel; 12/24-volt alternator, starter, pressure lubrication, hydraulic pump, dry type air cleaner, and air compressor.

Standard - Detroit Diesel 8V-92 TAC diesel, 8 cylinder. See page 4 for details.

Optional - Cummins N14-460E (available 1991). See page 4 for details.

Clutch — Lipe-Rollway 15-1/2" (0.39 m) 2 plate, dry disc.

■ Transmissions

Main — Eaton RTX 14708LL; ten speeds forward, three reverse.

Auxiliary — Spicer P-1241-C; 4-speed, midship mounting.

■ Bumper Counterweight

"A" counterweight — 13 500 lbs. (6 124 kg).

■ Carrier Cab

One-man, offset, fully enclosed. Air suspension mounted bucket seat with seat belt. Noise absorbing insulation with vinyl covering, sound reduction headliner, rubber floor mat; isolated from engine compartment, rubber mounted for sound level reduction. Instrument panel and dash includes speedometer, odometer, voltmeter, and gauges for fuel, engine temperature, air and oil pressures. Low air pressure warning buzzer, key locking switch, starter, tachometer, fire extinguisher, heater and defroster, 2-speed electric windshield wiper, and windshield washer. Tilt and telescope steering column.

■ Electrical System

12-volt; including dual sealed beam headlights, directional signals with 4-way flashing system, stop and tail lights, clearance lights, horn, lighting of instrument panel, dome light, headlight dimmer switch, and four 12-volt, group 31 batteries. Individual switches provide circuit control for hydraulic outrigger solenoid valves; one control station on each side of carrier.

■ Fuel Tank

One 85 gallon (322 liter) capacity tank; side mounted on carrier frame.

Standard auxiliary equipment — West Coast type rear view mirrors, lug wrench, 2-way reading bubble levels. High pressure lube fittings at all bearing points. Hand grab rails, carrier deck access ladder, back-up alarm, skid-resistant finish on carrier deck.

GENERAL INFORMATION ONLY

HC-228H Load Hoisting Performance

Available line speed and line pull - based on ISUZU 6SA1T at 2100 rpm full load speed.

Line pulls are not based on wire rope strength. See wire rope chart for maximum permissible single part of line working loads.

GENERAL INFORMATION ONLY

Wire rope: types available

- Type "N" - 6 X 25 (6 X 19 class), filler wire, extra improved plow steel, preformed, independent wire rope center, right lay, regular lay.
- Type "W" - 6 X 26 (6 X 19 class), extra improved plow steel, preformed, independent wire rope center, right lay, alternate lay.
- Type "P" - 19 X 7 non-rotating, extra improved plow steel, preformed, wire strand core.

Upperstructure

■ Frame

All-welded, precision machined unit;

■ Fuel tank

76 gallon (290 L) capacity

■ Power transmission

All functions hydraulically powered allowing positive, precise control, with independent or simultaneous operation of all crane functions.

Engine Specifications

Isuzu 6SA1T with oil filter, oil cooler, air cleaner, fuel filter, water separator, hour meter, tachometer and electrical shutdown.

Number of cylinders	6
Bore and stroke - inch	4 - 17/32 X 5 - 5/16
- (mm)	(115 X 135)
Piston displacement	513
- (in ³)	(8413)
- (cm ³)	
Engine rpm at full load speed	2100
Hi-idle rpm	2350
Net engine horsepower at full load speed, (HP)	195 (145 kw)
Peak torque - foot pounds	513
- (joule)	696
Peak torque - rpm	1400
Electrical system	24 volt
Batteries	2 - 12 volt

Hydraulic System

■ Hydraulic pumps

Two variable displacement piston pumps operating at 4000 PSI powers main drum, auxiliary drum, and boomhoist functions. One fixed displacement gear pump operating at 3000 PSI powers swing functions. One fixed displacement gear pump operating at 1210 PSI powers pilot control system, clutches, brakes and pump controls.

■ Hydraulic reservoir

78 US gallon (295 L), equipped with sight level gauge.

■ Relief valves

Each function is equipped with relief valves to protect the circuit from overload or shock.

■ Hydraulic filtration

Ten micron, full flow line filter furnished in control circuit. All oil is filtered prior to return to sump tank.

■ Hydraulic motors

Main hoist drum, auxiliary hoist drum, boomhoist, and swing are powered by axial piston motors.

■ Counterbalance valves

Hoist motors are equipped with counterbalance valves to provide positive load lowering and prevent accidental load drop when hydraulic power is suddenly reduced.

GENERAL INFORMATION ONLY

Principal Operating Functions

Control system

Remote controlled hydraulic servo for main drum and auxiliary drum. Mechanical linkage controls swing. Function speed is proportional to lever movement. Levers are adjustable for operator comfort.

Load hoisting and lowering

Main and auxiliary hoist drums are driven by individual axial piston motors and reduction gearing. Load hoisting or lowering is provided by actuating or reversing a hydraulic motor. Smooth, precise, power load lowering is attained with automatic hydraulic brake. The control lever provides two speeds for hoisting and lowering. Hoisting or lowering speeds are proportional to lever movement.

Load hoist drums

Main (front) and auxiliary (rear) hoist drums are 16-3/4" (.43 m) root diameter grooved for 7/8" (22 mm) wire rope. Mounted on anti-friction bearings.

Drum clutches

Speed-o-Matic® power hydraulic two-shoe clutches; internal expanding, lined shoes. Clutch spiders are splined to shafts; clutch drums are integral with hoist drums.

Load hoist clutches - Front and rear main drums - clutch drums 20" diameter, 5" face width. Swept area is 314 square inches.

Drum brakes

External contracting band type; operated by foot pedal equipped with a locking latch. Operator may select automatic brake mode (spring applied, hydraulically released), which will apply brakes when the hoist control lever is in the neutral position.

Drum rotation indicators

Standard for front and rear drums. Audible-type indicators.

Drum locking pawl

Standard for front and rear drums; electrically actuated and prevents drum rotation in a lowering direction.

Anti two-block system

Standard: A switch mounted on the boom peak activates a buzzer to warn the operator of a two-block condition and simultaneously disengages hoist function while applying the hoist brakes.

Swing system

Independent, hydraulic swing is driven; by an axial piston motor through a gear reduction system.

Swing brake - Spring applied, hydraulically released; controlled by button on swing control lever.

Swing lock - Mechanically controlled, 360° locking mechanism.

Swing speed - 0 to 2.2 r.p.m.

Boomhoist / lowering system

Independent, hydraulic boomhoist is driven by an axial piston motor through a gear reduction system. Boom hoisting or lowering is performed by actuating or reversing the motor.

Boomhoist drum

Single grooved lagging 10-11/16" (.27 m) root diameter.

Boomhoist drum locking pawl

Electrically operated.

Boomhoist brake

Spring applied, hydraulically released, multiple disc type brake. Brake is automatically applied when control lever is in neutral position.

Boomhoist limiting device - Restricts hoisting boom beyond recommended minimum radius.

Electrical system

24 volt negative ground system, with two 12-volt batteries. Standard lighting system includes: two 70 watt headlights mounted on machine front and one interior cab light.

Operator's cab

Full vision, modular compartment with safety glass panels. The completely independent cab is insulated against noise and vibration. Sliding operator's door, swing up roof window. Standard equipment includes: heater, defroster, windshield wiper, dry chemical fire extinguisher, sun visor, bubble-type level, fuel gauge, tachometer, hydraulic temperature gauge, engine oil pressure gauge, coolant temperature gauge and service monitor system.

Machinery cab

Hinged doors (one on right side, two on left side) for machinery access. Equipped with roof-top access ladder, electric warning horn and skid resistant finish on roof.

Catwalks

Standard on operator side. Catwalks remove for reduced travel width.

GENERAL INFORMATION ONLY

Link-Belt

CONSTRUCTION EQUIPMENT

Bail

Pinned to revolving frame. Six sheaves are provided for 14-part boomhoist wire rope reeving. Sheaves mounted on anti-friction bearings, sealed for lifetime lubrication.

Counterweight

Counterweight "A" - 23,000 lbs. (10 433 kg)

Counterweight "B" - 20,000 lbs. (9 072 kg)

Boom and Jib

Tubular Boom

Two-piece basic boom 50' (15.24 m) long with open throat top section. Boom 70" (1.77 m) wide, 62" (1.57 m) deep at connections. Alloy steel round tubular cords 4" (0.10 m) outside diameter.

Base Section

20' (6.10 m) long; boomfeet on 55" (1.40 m) centers.

Boom Extensions

Available in 10', 20', 30' and 40' (3.05, 6.10, 9.14 and 12.19 m) lengths with appropriate length pendants.

Boom Connections

In-line pin connections.

Boom Top Section

Open throat; 30' (9.14 m) long.

Boompoint Machinery

Six 21" (0.53 m) root diameter sheaves mounted on lifetime sealed anti-friction bearings for lifting crane applications.

Boom Live Mast

Supports boomhoist bridle and boom pendants. Required for all boom lengths. May be used as short boom for assembling and disassembling counterweight, outriggers and boom, but is not intended for general crane service. Refer to operator's manual for boom live mast lifting capacities.

Note: The mast may be self-stored either over the back of the machinery house or forward of the boomfoot during transportation. Resulting weight transfer will significantly affect axle loadings (see axle load chart on page 2).

Tubular Jib

Two-piece basic jib 30' (9.14 m) long; 36" (0.91 m) wide, 30" (0.76 m) deep at connections. Alloy steel tubular chords 2-1/4" (57 mm) outside diameter.

Base Section

15' (4.57 m) long; mounted to boom headshaft hubs.

Jib Extensions

Available in 10', 15', 20', 30' and 40' (3.05, 4.57, 6.10, 9.14 and 12.19 m) lengths; maximum jib length permitted - 70' (21.34 m).

Jib Connections

In-line pin connections.

Jib Tip Section

15' (4.57 m) long; single peak sheave 21" (0.53 m) root diameter mounted on anti-friction bearings.

Jib Mast

12' 7-5/8" (6.85 m) high, mounted on jib base section. One deflector sheave, mounted on anti-friction bearings, mounted within mast to guide jib load hoist line. Jib frontstay line and jib backstay line pin at top of jib mast.

Machine travel^① with open throat boom + jib, with no load.^②

Standard HC-228H must be equipped with the counterweight combinations below when the indicated boom or boom + jib lengths are used.	Minimum/maximum boom or boom + jib lengths allowed	On tires ^③							
		Jobsite moves at 1 mph (1.61 km/h) with boom or boom + jib in the air ^④ , and with upper facing rear only.				Jobsite moves at 5 mph (8.05 km/h), with boom or boom + jib horizontal over rear only, and supporting with standard suspension.

① Hook block may be carried only when attached to carrier.

② Limited to 85% of available stability with machine standing level on firm supporting surface.

③ For air pressure in front and rear tires refer to operator's manual or tire inflation chart on machine.

④ For minimum and maximum boom angles refer to operator's manual.

Caution: This material is for reference only. Operator must refer to in-cab capacity plate to determine allowable machine lifting capacities and operating procedures.

HC-228H Lift Crane Capacities

Boom - tubular:

70" (1.77 m) wide and 62" (1.57 m) deep with open throat top section; with 26" (7.92 m) live mast and 1-3/8" (35 mm) diameter boom pendants.

Mounting - Link-Belt carrier:

8 x 4 drive, 260" (6.60 m) wheelbase 11' 0" (3.35 m) wide.

Counterweights:

Cwt. "A": 23,000 lbs. (10 433 kg)

Cwt. "B": 19,330 lbs. (8 768 kg)

Bumper Cwt. "A": 13,500 lbs. (6 124 kg)

① Measured vertically from center of boom head sheave to ground

GENERAL INFORMATION ONLY

Link-Belt
CONSTRUCTION EQUIPMENT**HC-228H Lift Crane Capacities****Boom - Tubular**

70" (1.77 m) wide and 62" (1.57 m) deep with open throat top section; with 26" (7.92 m) live mast and 1-3/8" (35 mm) diameter boom pendants.

Mounting - Link-Belt carrier:

8 x 4 drive, 260" (6.60 m) wheelbase 11' 0" (3.35 m) wide.

Counterweights:

Ctwt. "A": 23,000 lbs. (10 433 kg)

Ctwt. "B": 19,330 lbs. (8 768 kg)

Bumper Ctwt. "A": 13,500 lbs. (6 124 kg)

① Measured vertically from center of boom head sheave to ground

**WARNING AND OPERATING INSTRUCTIONS**

Read and understand these operating instructions and the chart values before operating crane. Operation which does not follow these instructions may result in an accident.

General:

1. Rated lifting capacities as shown on lift chart pertain to this machine as originally manufactured and normally equipped by Link-Belt Construction Equipment Company. Modifications to the machine or use of optional equipment other than that specified can result in a reduction of capacity.
2. Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this machine must be in compliance with the information in the operator's, parts and safety manuals supplied with the machine. If these manuals are missing, order replacements through the distributor.
3. The operator and other personnel associated with this machine shall fully acquaint themselves with the latest applicable American National Standards Institute (ANSI) safety standards for cranes.

Lifting Crane Notes:

1. Capacities shown are not more 85% of the tipping loads with machine standing level on firm supporting surface. A deduction must be made from these capacities for weight of hook block, hook, sling, grapple, load weighing devices, etc. When using main hook while jib is attached reduce capacities by values shown on jib capacity chart. See operator's manual for all limitations when raising or lowering attachment.
- * Indicates these capacities are based on factors other than those which would cause a tipping condition.
2. For recommended reeving, parts of line, wire rope type and wire rope inspection, see operator's manual and parts manual.
3. For lifting 250,000 lb. (113 400 kg) capacity, 12 part load hoist line (7/8" - 22.23 mm - dia., type "N" wire rope) is required.
4. Do not swing over side until all four outrigger beams are fully extended, all five jacks are extended until all tires are clear of the ground and machine is properly leveled on a firm supporting surface.
5. The least stable rated condition is over the side.
6. The jib cannot be used on a boom longer than 210' (64.01 m). For boom-jib combination see plate no. C4P0002.
7. Maximum boom length without jib is 240' (73.15 m).
8. These capacities apply only to the machine as originally manufactured and normally equipped by Link-Belt Construction Equipment Company.
9. Machine equipped with "A" or "AB" upper counterweight - do not swing over side until outriggers have been set.
10. Capacity columns headed "A + A" indicate 23,000 lb. (10 433 kg) "A" upper counterweight with 13,500 lb. (6 124 kg) "A" bumper counterweight.
11. Capacity columns headed "AB + A" indicate 42,330 lb. (19 201 kg) "AB" upper counterweight with 13,500 lb. (6 124 kg) "A" bumper counterweight.
12. Load ratings shown on this chart are based on freely suspended loads and make no allowance for such factors as the effect of wind, ground conditions and operating speeds. The operator therefore shall reduce load ratings in order to take these conditions into account.

Working Areas**Note:**

1. These lines determine the limiting position of any load for operation within working areas indicated.
2. Do not swing over side until all four outrigger beams are fully extended, all five jacks are extended until all tires are clear of the ground and machine is properly leveled on a firm supporting surface.

Jib Capacity
Notes:

- Capacities are shown in pounds and are the maximum allowable. Capacities are based on machine standing level on firm supporting surface under ideal job conditions. Capacities are not more than 85% of the tipping loads unless marked with an asterisk (*).
 - Asterisk indicates capacities are based on factors other than those which would cause a tipping condition.
- Capacities are for 360° swing on five outrigger jacks.
- Capacities are limited to a Link-Belt 62" x 70" open throat tubular boom, live mast and a Link-Belt 15 ton, 30" x 36" cross section jib with a 12' 7-5/8" high jib strut properly assembled.
- Do not swing over side until all four outrigger beams are fully extended, all five jacks are extended, until all tires are clear of the ground and machine is properly leveled on a firm supporting surface.
- Two parts of 7/8" diameter type "N" or "RB" wire rope is required for maximum lift.
- Capacities are for 30', 40', 50', 60' and 70' jib lengths only.
- A jib cannot be used on the open throat boom that is longer than 210'.
- The least stable condition is over the side.
- A deduction must be made from the jib capacities for weight of hook block, hook, sling, grapple, load weighing devices, etc.
- When using main hook, while jib is attached, reduce boom capacities by the following values:
 - 30' jib - 2,200 lbs.
 - 40' jib - 2,500 lbs.
 - 50' jib - 2,900 lbs.
 - 60' jib - 3,200 lbs.
 - 70' jib - 3,500 lbs.
- Refer to all notes on applicable lifting crane capacity chart in addition to these notes.
- Capacities apply only to the machine as originally manufactured and normally equipped by Link-Belt Construction Equipment Company.

A unit of Sumitomo Construction Machinery Co., Ltd.

Link-Belt

HC-228H maximum allowable open throat capacities on tires straight over the rear and 360°.

CONSTRUCTION EQUIPMENT

Capacities are for a crane on L-B 260" W.B. carrier and equipped with 1-3/8" diameter pendents, and 62" x 70" tubular boom. Counterweights per plate No. C4P0039. Refer to all notes at bottom.

WARNING AND OPERATING INSTRUCTIONS

READ AND UNDERSTAND THESE OPERATING INSTRUCTIONS AND THE CHART VALUES BEFORE OPERATING CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT.

GENERAL:

- Rated lifting capacities in pounds as shown on lift chart pertain to this machine as originally manufactured and normally equipped. Modifications to the machine or use of optional equipment other than that specified can result in a reduction of capacity.
- Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this machine must be in compliance with the information in the operator's parts and safety manuals supplied with this machine. If these manuals are missing, order replacements through the distributor.
- The operator and other personnel associated with this machine shall fully acquaint themselves with the latest applicable American National Standards Institute (ANSI) safety standards for cranes.

Lifting Crane

Notes:

- Capacities shown are in pounds and are not more than 75% of the tipping loads with machine standing level on firm supporting surface. A deduction must be made from these capacities for weight of hook block, hook, sling, grapple, load weighing devices, etc. When using main hook while jib is attached reduce capacities by values shown on jib capacity chart. See operator's manual for all limitations when raising or lowering attachment.
- Indicates these capacities are based on factors other than those which would cause a tipping condition.

- For recommended reeving, parts of line, wire rope type, and wire rope inspection, see operator's manual and parts manual.
- Machine with "A" upper counterweight — Do not swing over side until "A" bumper counterweight and both front and rear outrigger box assemblies are installed correctly.
- Machine with "AB" upper counterweight — Do not swing over side until all four outrigger beams are fully extended, all five jacks are extended until all tires are clear of the ground and machine is properly leveled on a firm supporting surface.
- The least stable rated condition is over the side.
- Machine carrier must be equipped with both front and rear outrigger box assemblies.
- Dynamic capacities are restricted to a maximum travel speed of 1 mph. The boom must be centered straight over the rear with swing lock engaged and the load must be restrained from swinging.
- Machine to be equipped with 1024 AG rims on rear axles. Rim identification number can be found on inside diameter of rims.
- Capacity columns headed "O + O" indicate no upper cwt. with no bumper cwt.
- Capacity columns headed "A + A" indicate 23,000# "A" upper cwt. with 13,500# "A" bumper cwt.
- Capacity columns headed "AB + A" indicate 42,330# "AB" upper cwt. with 13,500# "A" bumper cwt.
- Load ratings shown on this chart are based on freely suspended loads and make no allowance for such factors as the effect of wind, ground conditions and operating speeds. The operator therefore shall reduce load ratings in order to take these conditions into account.
- These capacities apply only to the machine as originally manufactured and normally equipped by Link-Belt Construction Equipment Co.
