Hydraulic System

Hydraulic Pumps

The pump arrangement is designed to provide hydraulically powered functions allowing positive, precise control with independent or simultaneous operation of all crane functions.

- Two variable displacement pumps operating at 4,264 psi (300kg/cm²) and 57 gal/min (216L/min) powers load hoist drums, boom hoist cylinder, and travel.
- One fixed displacement gear type pump operating at 3,974 psi (280kg/cm²) and 35.7 gal/min (135L/min) powers the swing motor.
- One fixed displacement gear type pump operating at 711 psi (50kg/cm²) and 8.5 gal/min (32.4L/min) powers the controls.

Pump Control "Fine Inching" Mode

Special pump setting, selectable from the operator's cab, that allows very slow movements of load hoist drums, boom hoist drum, and travel for precision work.

Hydraulic Reservoir

119 gal (450L), equipped with sight level gauge. Diffusers built in for deaeration.

Filtration

Twelve micron, full flow, line filter in the control circuit. All oil is filtered prior to entering the reservoir.

Counterbalance Valves

All hoist motors are equipped with counterbalance valves to provide positive load lowering and prevent accidental load drop if the hydraulic pressure is suddenly lost.

Boom and Attachments

Design

Four section, box type construction of high tensile steel consisting of one base section and three telescoping sections. The vertical side plates have diamond shaped steel impressions for superior strength to weight ratio. The first telescoping section extends independently by means of one double-acting, single stage hydraulic cylinder with integrated holding valves. The second and third telescoping sections extend proportionally by means of one double-acting, single stage cylinder with integrated holding valves and cables.

- Mechanical boom angle indicator
- Maximum tip height for *A–max* mode is 64 ft 11 in (19.79m) and standard mode is 111 ft (33.83m).
