BRIEF SPECIFICATIONS

LIFTING CRANE AND CLAMSHELL

30' boom standard. Working weight with ou gasoline engine, no bu	triggers, cket	35,830 lbs
Swing speed	· · · · · · · · · · · · · · · · · · ·	4.5 r.p.m
Lifting Crane Lagging 9" hoist (front) 9" hoist (rear)	2,400 bs	@ 134 sf.p.m
Clamshell Lagging 11" closing (front) 11" holding (rear)	10,200 lbs 9,950 lbs	@ 162 f.p.m @ 162 f.p.m
DRAGLINE		
30' boom standard. Working weight, with out- gasoline engine, no buc	ket	
Swing speed	1: Dll	

- ① Lifting capacities shown are in pounds and are not more than 85% of minimum tipping loads with machine standing on firm level ground. A deduction musbe made from the lifting capacities for the weight of hookblock, hook, sling grapple, etc. Maximum recommended boom length for lifting crane is 50 feet
- * Indicates these lifting capacities are based on tire capacity. See Note (1 regarding all other lifting capacities.
- 2 Retractable high gantry required for booms over 40 feet long.
- 3 Lifting crane service only.

CLAMSHEL

5,300 5,300 5,300 4,860 3,800 5,300 5,300 5,300 4,500 3,610 2,900

‡ Dragline operation with boom angle less than 35° is seldom advisable.

NOTE: Six part hoist line 1/2" cable required for maximum lifts.

4 For normal dragline, clamshell, lifting magnet or similar work, weight of bucket or magnet plus load should not exceed capacities shown in dragline or clamshell-magnet chart with machine standing on firm level ground. These are values for normal conditions and exceptions may be made for above average conditions. However, allowances must be made for soft or uneven footing, bucket suction and other unfavorable conditions. Boom length for average dragline, clamshell, magnet or similar work should not exceed 40 feet.

POWER UNITS

Suitable for operation up to 4,000' above sea leavel. For operation at higher altitudes consult factory.

Standard—Waukesha 190GLBU gasoline engine with torque converter, six cylinder, 55 net h.p. @ 1680 r.p.m. full load speed.

Optional at extra cost—Diesel: Waukesha with torque converter, General Motors with torque

HOE WORKING RAN	1GE	S	
Bucket capacity, cubic yards Bucket cutting width (standard) Boom length Average sweep radius Height of hoe mast Maximum digging radius Maximum digging depth() Radius beginning of dump Ground clearance beginning of dump Ground clearance end of dump Ground clearance end of dump Over-all height end of dump Radius of boom hinge pin	XXTXC-H@4BQY	3/4 39!/2" 16' 6" 9' 7" 14' 6" 29' 1" 16' 0" 8' 8" 10' 5" 20'11" 16' 5" 21' 5" 21' 5"	

① Dimension "G" shows maximum digging depth with 45° boom conforming to U.S. Dept, of Commerce Standards. The maximum "effective" digging depth will vary according to the type of soil and excavation.

HOE LIFTING CAPACITIES

These are maximum litting capacities for the hoe when used for laying pipe. Two part hoist line used.

BOOM RADIUS®	LIFTING CAPACITIES
12'	9,300 lbs.
15'	7,600 lbs.
20'	4,700 lbs.

Radius is measured from machine centerline of rotation to centerline of boom peak shaft. Capacities are based upon hoe arm being in a vertical position.

These specifications comply with the recommended Commercial Standard C590-58, developed under the National Bureau of Standards and issued by the United States Department of Commerce.
