Why Buy a National Series 1400H?

- 33-ton Rating The new 1400H is a 33-ton machine, an 18% increase in capacity over the Series 1100.
- New 127-foot Five-section Boom The longest in its size range. The longer boom allows the operator to perform more lifts without the use of a jib, reducing setup time and improving efficiency. A four-section 100-foot boom option is also available.
- Overload Protection All National cranes are equipped with overload protection:
- Load Moment Indicator (LMI) standard on all Series 1400H machines.
- LMI display and CPU are weatherproof.
- LCD display is visible in full or low light.
- All crane load lifting values are displayed simultaneously.
- Crossframe Outriggers Mainframe outriggers are crossframe H-style, with 24'6" (7.47 m) span, with mid-span setting of 18'6" (5.64 m). Rear stabilizers are H-style with 18'6" (5.64 m) span. Removable ball-and-socket aluminum outrigger pads on mainframe outriggers.
- Self-lubricating "Easy glide" boom Wear Pads The self-lubricating boom pads, standard on the 1400H, reduce the conditions that cause boom chatter and vibration. The net result is smoother boom operation.
- Internal Anti-two-block Wire This exclusive design, standard on the Series 1400H, routes the wire through the inside of the boom. No more snagging the wire on obstructions.
- **Rotation** 375° non-continuous rotation is standard, with an option for continuous rotation.
- Adjustable Swing Speed Standard on the 1400H. A control knob located on the swing motor brake release valve can be easily adjusted to the crane operator's swing speed preference.
- Heavier Duty Torsion Box The stronger standard torsion box improves rigidity, reduces truck frame flex and reduces the need for counterweight
- Speedy-reeve Boom Tip and Sheave Blocks These standard features simplify rigging changes by decreasing the time needed to change line reeving.
- Pre-painted Components Painting crane components before assembly reduces the possibility of rust, improves serviceability and enhances the appearance of the machine.
- Oil Cooler Radiator mounted on truck frame with electric fan is standard, with an option to deduct the cooler for low duty-cycle applications.
- Improved Serviceability -

- Bearings on the boom extend and retract cables can be greased through access holes in the boom side
- Number of internal boom parts has been reduced, decreasing service time when rebuilding the machine.
- New State-of-the-art Control Valve Provides smoother operation. The new control valve has specially designed spools to provide optimum control for the smoothest metering and precise load positioning.
- National Crane Is the Market Leader National is number one in the production of commercial truckmounted boom trucks. National has the resources, programs and people to provide our customers with reliable
- National has the boom truck industry's leading test program. The Series 1400H is a completely new design that has been through a strenuous six-month testing regimen. Structural parts of the crane have been cycle tested up to 60,000 cycles at full capacity. In addition to cycle testing, each model has been subjected to state-of-the-art strain gauge testing that measures metal deformation as small as one one-millionth of an inch. The net result is that any weak areas are caught in test, not on job sites where costly downtime occurs.
- Outrigger, lift and telescoping cylinders are manufactured by National Crane, so that the seals, packing glands, and other cylinder components are traced for accurate shipment of replacement parts.
- Parts are available for all National Crane machines, even if they are 35 years old.
- National has a formalized quality program and is ISO 9001 approved.
- You Expect a National Crane to be a Quality Product That Will Provide Years of Service and So Do We.

1400H Capacities

Load Rating Chart: Model 14127H with 30-ft jib

Series 1400H Load Rating Charts are available for all Model 14100H and 14127H cranes. National will send you a chart by FAX or mail on request – or you may secure needed load rating information through your nearest National dealer.

*Shaded areas are structurally limited capacities

- Do not operate crane booms, jib extensions, any accessories or loads within 10 ft (3m) of live power lines or other conductors of electricity
- Jib and boom capacities shown are maximum for each section
- Do not exceed jib capacities at reduced radii
- Load ratings shown on the appropriate charts are maximum allowable loads with the crane mounted on a factory-approved truck and all outriggers at either full span or at mid span range and set on a firm level sur-face so that the crane is level and all tires are suspended
- · Always level the crane with the level indicator located on the crane
- The operator must reduce loads to allow for factors. such as wind, ground conditions, operating speeds and their effects on freely suspended loads
- · Overloading this crane may cause structural collapse • Weights of any accessories attached to the boom or
- loadline must be deducted from the load chart
- · Do not deadhead lineblock against boom tip when extending boom or winching up
- Keep at least three wraps of loadline on drum at
- Use only specified cable with this machine

Mounting Configurations

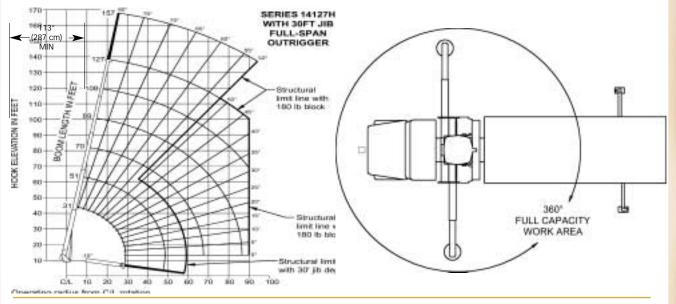

The mounting configuration shown is based on an 85% stability factor. The complete unit must be installed in accordance with factory requirements and a test performed to determine actual stability and counterweight requirements since individual truck chassis vary. If bare truck weights are not met, counterweight will be required. For 360° stability, front bumper stabilizer (SFO) is required. Chassis must be equipped with front frame suitable for SFO addition. Contact factory for truck specifications. (Specs shown are for 14127H. Contact factory for 14100H details).

Working area	
Gross Axle Weight Rating Front	20,000 lb (9072 kg)*
Gross Axle Weight Rating Rear	
Gross Vehicle Weight Rating	60,000 lb (27 216 kg)*
Wheelbase	
Cab to Axle/trunnion (CA/CT)	
After Frame (AF)	
Frame Section Modulus (SM), under crane w/110,000 PSI (758 MPa)	
Stability Weight, Front	
Stability Weight, Rear	8.100 lb (3674 kg) minimum**
Estimated Average Final Weight	

The diagram shows the 360° working area achieved with the front stabilizer (optional on the Series 1400H). The front stabilizer is required when extending the boom and lifting loads forward of the outriggers. A minimum of 12-in³ (197 cm³) section modulus at 110,000 psi (759 MPa) is required from the rear of the front spring hanger forward to the front stabilizer. Integral front frame extension required

- * Required to mount basic crane with 30-ft (9.15-m) jib option. Additional options or heavier bare chassis weights will require additional axles or a GVWR in excess of 60,000 lb (27 216 kg); in some states, special permits for overload are required.
- ** Estimated axle scale weights prior to installation of crane, stabilizers and subbase for 85% stability.
- *** Includes basic crane without jib, 100-gal (379-L) of fuel, 22' wood flatbed, hydraulic pump & PTO, rear bumper, rear stabilizer, boom rest and two workers 300lb (136 kg) in cab.

Note: Chassis will require extended front frame rails for SFO addition

- Gross Vehicle Weight Rating (GVWR) is dependent on all components of the vehicle (axles, tires, springs, frame, etc.) meeting manufacturers' recommendations; always specify GVWR when purchasing trucks.
- Diesel engines require a variable speed governor and energize-to-fuel solenoid for smooth crane operation. Electronic fuel-injected
- subbase and an 85 percent stability factor.
 - The complete unit must be installed in accordance with factory requirements, and a test performed to determine actual stability and counterweight requirements per SAE J765; contact the factory for details

• All mounting data is based on a National Series 1400H with the standard

*Estimated axle scale weights prior to installation of crane, stabilizers and subbase for 85% stability
