

Grove Manitowoc National Crane Potain

National Crane Series 800D Product Guide

ASME B30.5 Imperial 85%

Features

Four-section boom

At 30,48 m (100 ft) the Series 800D boom is the longest in its size range. The longer boom allows the operator to perform more lifts without the use of a jib, reducing setup time and improving efficiency.

National Crane Series 800D

- 20,87 t (23 USt) maximum capacity
- 46,32 m (152 ft) maximum vertical reach
- 33,22 m (109 ft) maximum vertical hydraulic reach

Boom tip

The speedy-reeve boom tip and sheave blocks simplify rigging changes. Load line wedge socket removal is not required for reeving of multi-part line options.

Optional auger attachment Available on the 890D only, the 14,000 ft/lb two-speed auger attachment has a maximum digging radius of 39 ft.

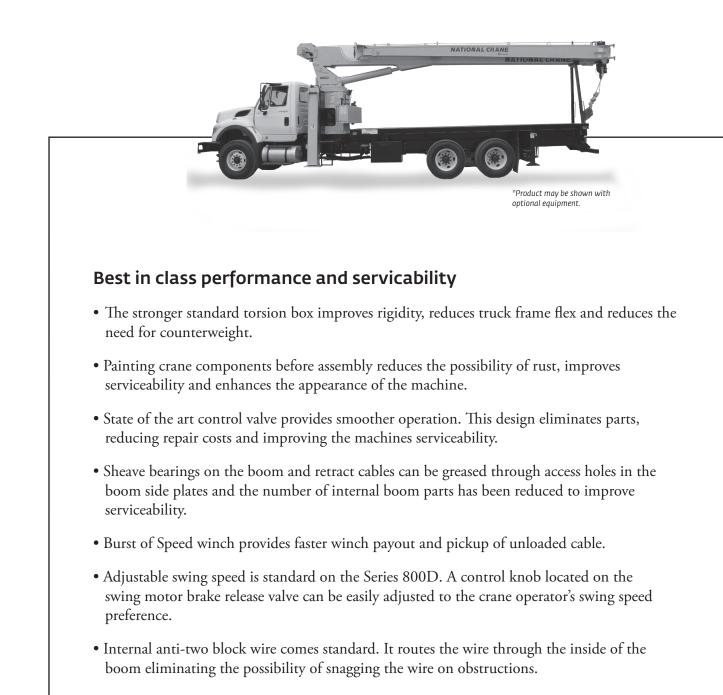

Easy Glide boom wear pads These wear pads reduce the conditions that cause boom chatter and vibration resulting in smoother crane operation.

Overload protection

All National Crane boom trucks are equipped with overload protection. A Load Moment Indicator (LMI) is required on all machines equipped with jibs or personnel baskets.

Features

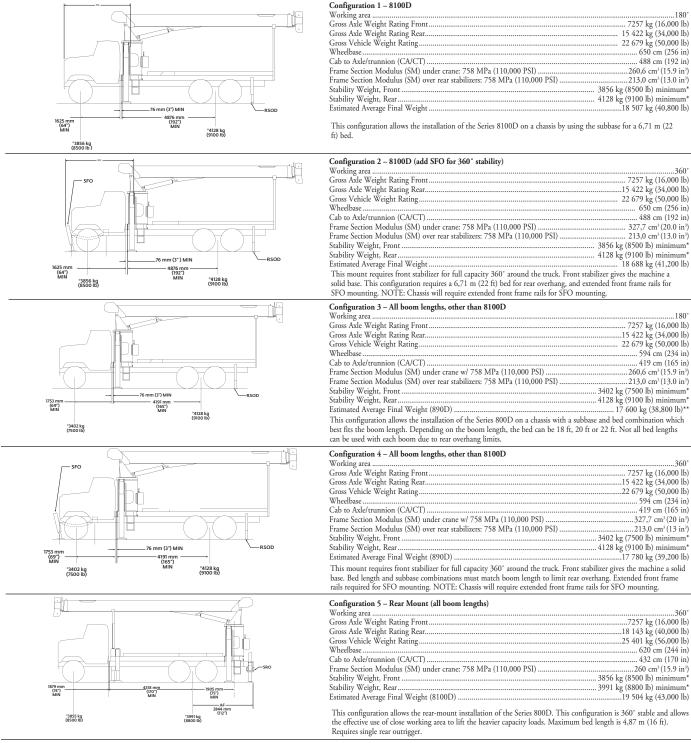

Contents

Mounting configurations	5
Specifications	6
Capacities	8
Dimensions	13
Accessories	14

Mounting configurations

The configurations are based on the Series 800D with an 85% stability factor. The complete unit must be installed in accordance with factory requirements and a test performed to determine actual stability and counterweight requirements since individual truck chassis vary. Trucks with a frame height in excess of 107 cm (42 in) after mounting will have a final mounted unit height more than 411,5 cm (13 ft 6 in). Chassis that do not meet these minimum stability weights may require counterweight.

- Notes
- Gross Vehicle Weight rating (GVWR) is dependent on all components of the vehicle (axles, tires, springs, frame, etc.) meeting manufacturers' recommendations; always specify GVWR when purchasing trucks
- Diesel engines require a variable speed governor and energize-to-run fuel solenoid for smooth crane operation; electronic fuel injection requires EET engine remote throttle

 All mounting data is based on a National Series 800D with an 85 percent stability factor
 The complete unit must be installed in accordance with factory requirements, and a test performed to determine actual stability and counterweight requirements per SAE J765; contact the factory for details

Transmission neutral safety interlock switch is required

*Estimated axle scale weights prior to installation of crane, stabilizers and subbase for 85% stability. **If the distance from the front bumper (SFO) to center of rotation exceeds 366 cm (144 in), the 12,19 m (40 ft) overall truck length restriction will be exceeded. Overall length restrictions vary from state to state. In some states it is legal to be more than 12,18 m (40 ft) in length, and some states allow overlength permits.

Specifications

Boom and jib combinations data

Available in three basic models.Model 851D – Equipped with a 6,4 m - 15,5 m (21 ft - 51 ft) three-section boom. Maximum tip height is 18,9 m (62 ft).Model 890D – Equipped with a 8,23 m - 27,43 m (27 ft - 90 ft) four-section boom. This model can be equipped with a 7,62 m - 13,41 m (25 ft - 44 ft) two-section jib. Maximum tip height with 13,41 m (44 ft) jib is 43,58 m (143 ft).8,23 m - 27,43 m (27 ft - 90 ft) four-section boom.8,23 m - 27,43 m (27 ft - 90 ft) four-section boom.8,23 m - 27,43 m (27 ft - 90 ft) four-section boom.8,25 m - 27,43 m (27 ft - 90 ft) four-section boom.8,25 m - 27,43 m (27 ft - 90 ft) four-section boom.8,25 m - 27,43 m (27 ft - 90 ft) four-section boom.8,29 m - 30,48 m (29.5 ft - 100 ft) four-section boom.8,99 m - 30,48 m (29.5 ft - 100 ft) four-section boom.8,99 m - 30,48 m (29.6 ft - 100 ft) four-section boom.8FJ44M 7,62 m - 13,41 m (25 ft - 44 ft) two-section jib

- C

Note: Maximum tip is measured with outriggers/stabilizers fully extended.

851D: 51 ft boom with no jib

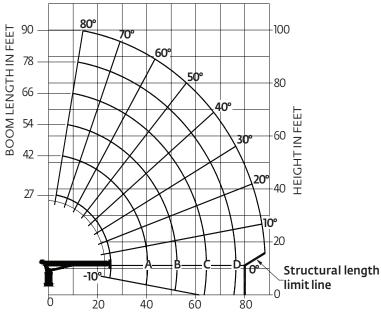

CAUTION:

- Do not operate crane booms, jib extensions, any accessories or loads within 6,1 m (20 ft) of live power lines or other conductors of electricity.
- Jib and boom capacities shown are maximum for each section.
- Do not exceed capacities at reduced radii.
- Load ratings shown on the load rating charts are maximum allowable loads with the outriggers properly extended on a firm, level surface and the crane leveled and mounted on a factory recommended truck.
- Always level the crane with the level indicator located on the crane.
- The operator must reduce load to allow for factors such as wind, ground conditions, operating speeds and their effects on freely suspended loads.
- Overloading this crane may cause structural collapse or instability.
- Weights on any accessories attached to the boom or loadline must be deducted from the load chart capacities.
- Do not exceed jib capabilities at any reduced boom lengths.
- Do not deadhead lineblock against boom tip when extending boom or winching up.
- Keep at least three wraps of loadline on drum at all times.
- Use only specified cable with this machine.

Series 800D

890D: 90 ft boom with 44 ft jib

CAUTION:

- Do not operate crane booms, jib extensions, any accessories or loads within 6,1 m (20 ft) of live power lines or other conductors of electricity.
- Jib and boom capacities shown are maximum for each section.
- Do not exceed capacities at reduced radii.
- Load ratings shown on the load rating charts are maximum allowable loads with the outriggers properly extended on a firm, level surface and the crane leveled and mounted on a factory recommended truck.
- Always level the crane with the level indicator located on the crane.
- The operator must reduce load to allow for factors such as wind, ground conditions, operating speeds and their effects on freely suspended loads.
- Overloading this crane may cause structural collapse or instability.
- Weights on any accessories attached to the boom or loadline must be deducted from the load chart capacities.
- Do not exceed jib capabilities at any reduced boom lengths.
- Do not deadhead lineblock against boom tip when extending boom or winching up.
- Keep at least three wraps of loadline on drum at all times.
- Use only specified cable with this machine.

NOTE:

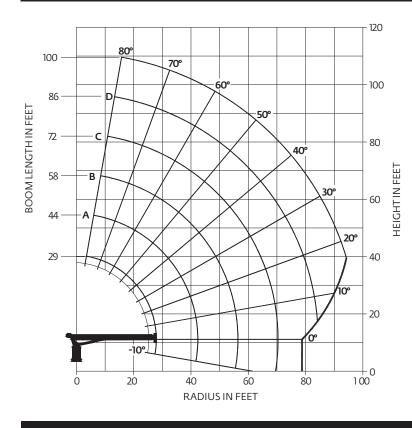

1. Operate with jib by radius when main boom is fully extended. If necessary increase boom angle to maintain loaded radius.

2. Operate with jib by boom angle when main boom is not fully extended. Do not exceed rated jib capacities at any reduced boom lengths.
