- **Turbocharged engine** offers low sound levels, low fuel consumption, excellent high altitude performance and superior torque for optimum horsepower usage.
- **Total operator comfort** means less fatigue and greater production. Spacious OMEGA cab module allows placement of controls "in the palm of your hand", lots of leg and elbow room, and full vision of all activities.
- **A duty-cycle machine** — OMEGA's powerful winches offer high line speeds and pull. VOLUMATIK® hydraulic system provides optimum oil flow for fast crane functioning.
- **Less downtime** — OMEGA is "Pit-Stop" maintenance-proven. It's industry's most serviceable crane — engineered for parts commonality, accessibility and fast tear-down.

An optional single pump can be added to provide 24 gpm (90.84 lpm) for 3 speeds to main winch. Total flow at 2500 engine rpm is 118 gpm (446.6 lpm) for 3 pump system and 142 gpm (537.5 lpm) for 4 pump system. From this flow, all but 37.5 gpm (141.9 lpm) is filtered to 10 microns on return to the reservoir. Another filter in the pressure line of the swing, steer and outrigger circuit filters to 20 microns. Total filter capacity is 275 gpm (1040.9 lpm) to assure minimum fluid resistance and power loss while protecting seals in cylinders, valves and motors. The 90 gal. (340.7 liter) reservoir is located on right side of carrier. Pumps, valves, cylinders and motors are readily accessible and easy to service. Control valves are four-way, three-position type with low effort spools and pilot-operated relief valves for quick, smooth response. Operating instructions

P&H crane meets the requirements of ANSI B30.15 (1973). Boom (boom, lattice extension and jib) has been tested per SAE J1063, machine stability tested per SAE J765. LOAD RATINGS shown apply only to machine as originally manufactured and equipped by Harnischfeger Corporation.

WARNING: Operation of this machine in excess of rated loads, in areas of not rated, or with disregard of instructions voids this warranty.

LOAD RADIUS is horizontal distance from axis of rotation (before loading) to center of vertical hoist line (after loading). Actual working radii should be an accurate measurement.

Boom, lattice extension and jib point height dimensions are measured from ground to center of load sheave.

LOADED BOOM ANGLE is the angle between the boom base section and the horizontal axis after lifting rated load at rated radius. Loaded boom angles shown are with rated loads applied and provide an approximation of the LOAD RADIUS at the specified BOOM LENGTH (includes lattice extension). The boom angle before loading should be slightly greater to account for boom deflection.

4. LOAD RATINGS shown are for machine with counterweight as shown, leveled and standing on firm, uniform supporting surface. Ratings are based on freely suspended loads and are not more than 85% of minimum tipping loads. Ratings above the bold horizontal line are based on machine's hydraulic or structural competence and not on machine stability (tipping conditions).
5. To determine LOAD RATINGS in-between those shown on chart, proceed as follows:
 - a. for boom lengths not shown, use rating of next longer rated boom;
 - b. for load radii not shown, use rating of next longer rated radius.
6. Deduct weight from LOAD RATINGS of all suspended load handling devices such as hooks, hookblocks, slings, buckets, etc. as they are considered part of the load. See table for deductions.

7. Deduct weight from LOAD RATINGS of fixed boom attachments (jib, boom extension) either stowed or erected, as they reduce capacity of boom. See table for deductions.
8. LOAD RATINGS shown make no allowance for such factors as wind effect on lifted loads, ground conditions, out-of-level, operating speed or conditions that could be detrimental to safe operation of this machine. The operator must judge these factors and reduce ratings accordingly.
9. "WITH OUTRIGGERS" LOAD RATINGS are based on outriggers fully extended and set at a distance of 8 ft. 2.75 in. (2.51 m) from longitudinal axis of carrier to vertical axis of outrigger float. Machine must be level and supported by outriggers with tires free of supporting surface.
10. "WITHOUT OUTRIGGERS" LOAD RATINGS are based on lift limitations and conditions of tires inflated to pressures shown in table, and apply only when rear axle lockouts are engaged. Over front "Pick and Carry" ratings are limited to travel speed less than 2½ mph (4 kmph) on firm, level ground with load centered over front of machine and load restrained from swinging.
11. Maximum JIB LOAD RATINGS are based on structural competence. Ratings at any radius shall not exceed BOOM LOAD RATINGS at same radius and shall not exceed maximum ratings shown.
12. Jibs are intended to increase lifting height — not load radius. Maximum JIB LOAD RADIUS shall not exceed maximum BOOM LOAD RADIUS of boom length on which jib is mounted.
13. For bucket ratings on jib, deduct 20% from maximum JIB LOAD RATINGS.
14. Method of telescoping boom is random with each section extendible a distance of 18 feet (5.49 m). Sections resynchronize when boom is fully retracted or extended.
15. The maximum load which may be telescoped is limited by hydraulic pressure, boom angle and lubrication. It is safe to telescope any load within limits of load rating chart.

WARNINGS

- FOR BOOM LENGTHS LESS THAN 80 FEET WITH MANUAL SECTION EXTENDED, THE RATED LOADS ARE DETERMINED BY BOOM ANGLE ONLY IN THE COLUMN HEADED BY 80 FOOT BOOM. FOR BOOM ANGLES NOT SHOWN USE RATINGS OF NEXT LOWER BOOM ANGLE.
- FOR BOOM LENGTHS LESS THAN 85 FEET WITH MANUAL RETRACTED AND LESS THAN 102 FEET WITH MANUAL EXTENDED, THE LATTICE BOOM EXTENSION RATED LOADS ARE DETERMINED BY BOOM ANGLE ONLY IN THE COLUMN HEADED BY 85 FOOT BOOM AND 102 FOOT BOOM RESPECTIVELY. FOR ANGLES NOT SHOWN USE RATING OF NEXT LOWER BOOM ANGLE.

BOOM RATINGS MUST BE REDUCED BY WEIGHT OF BOOM ATTACHMENTS AND LOAD HANDLING DEVICES. SEE TABLE.

RATINGS ABOVE THE HEAVY LINE ARE BASED ON STRUCTURAL COMPETENCE AND NOT ON MACHINE STABILITY.

TO HELP PREVENT TIPPING CONDITIONS WHEN "LIFTING ON RUBBER", IT IS RECOMMENDED THAT —

- MINIMUM BOOM LENGTHS BE USED.
- OUTRIGGERS BE EXTENDED AS FAR AS POSSIBLE AND CLEAR OF GROUND.

WARNING: SEE AREAS OF OPERATION PLATE FOR WORKING RANGES. WHEN TRANSPORTING A LOAD MACHINE MUST BE ON FIRM, LEVEL SURFACE WITH MECHANICAL HOUSELOCK ENGAGED AND LOAD CENTERED OVER FRONT OF MACHINE AND RESTRAINED FROM SWINGING. DO NOT EXCEED 2 1/2 MPH (4 KM/HR) VEHICLE SPEED.

CREEP IS MOTION FOR LESS THAN 200 FT. IN A 30 MIN. PERIOD & NOT EXCEEDING 1 MPH.

STABILITY RATINGS DO NOT EXCEED 85% OF TIPPING LOADS WITH AUXILIARY SHEAVE ON BOOM POINT AND STOWED BOOM EXTENSION.

WARNING: "WITHOUT OUTRIGGER" LIFTS WITH JIB OR BOOM EXTENSION WORKING POSITION ARE PROHIBITED.

WARNING:

LOAD RATINGS WITHOUT OUTRIGGERS, DEPEND ON TIRE CAPACITY AND CONDITION, INFLATED PER TABLE, AND APPLY ONLY WHEN REAR AXLE LOCKOUTS ARE ENGAGED.

Jib ratings

- 1 MAXIMUM JIB LOAD RATINGS ARE BASED ON STRUCTURAL COMPETENCE AND DO NOT EXCEED 85% OF TIPPING LOAD WITH FULLY EXTENDED OUTRIGGERS. USE OF OUTRIGGERS IS REQUIRED WHEN BOOM IS EQUIPPED WITH JIB.
- 2 FOR BUCKET RATINGS ON JIB, DEDUCT 20% FROM MAXIMUM JIB LOAD RATINGS.
- 3 WARNING: DO NOT LIFT WITH JIB AT BOOM ANGLES BELOW 30°. LOSS OF STABILITY OCCURS RAPIDLY.
