PALFINGER CRANE

THE UNIVERSAL TALENT

MULTIFUNCTIONAL AND RELIABLE

Ideally suitable for loading and unloading unit cargo and construction machinery, the PK 18500 *Performance* stands out by virtue of its reliability and versatility. Three stabiliser spreads and up to five hydraulic extension arms make it the perfect working unit for an extremely wide range of jobs.

GREAT PERFORMANCE

THE IDEAL LOADING CRANE

Adjustable slide blocks

These ensure optimal lateral guidance of the extension system.

Functional Design

- Enclosure of the entire electronic system
- Enclosure in the area of the control valve

Ergonomic crane control

The operating levers for all crane functions are arranged ergonomically on the console. This facilitates comfortable, efficient working. The control console is mounted so that it is easy to service.

Load-holding valves

They prevent the crane arm from dropping and are mounted as standard on the elevating and knuckle-boom cylinder as well as on the extension arm. The valves are positioned in such a way that they are protected from being damaged.

Return oil utilisation

The high speed of the extension system is impressive. It results from return oil utilization feature, which is installed as standard, and the generously dimensioned hydraulic pipes. This makes for increased efficiency during all types of working!

KTL – the cathodic dip painting

The shot-blasted crane parts are covered in zinc phosphate in an immersion process and coated electro-statically. The subsequent two-component top coating of paint provides a surface protection which in the past was usually only found in the automotive industry.

PRECISION CONTROL

Extension system

The extension cylinders run on rollers.

Height compensation of the extension cylinders.

Hose equipment for accessories

With this option you can provide the oil supply to accessories. The hoses are routed in compact troughs and plastic link chains. They are therefore very well protected.

Internally routed oil ducts

The internally routed oil passages make it possible to have a compact design for the extension system and ensure perfect protection from damage.

Outriggers

The 4.8 m (15' 9") outrigger system installed as standard ensures good stability. As an option a 6.6 m (21' 9") telescopic outrigger is available. The pipework to the support cylinders is internally routed in the outriggers, providing a high level of protection from damage at all times. On request, the outriggers can be supplied with support cylinders that swivel up hydraulically through 180°.

Optional

- The radio remote control
- The PALTRONIC 50 electronic control system
- The hydraulic overload protection

Central lubrication

For all grease points on the base frame.
