AR-1200M-1-90103

TOTAL RATED LOADS

- 1. The total rated loads shown are for the case where the outriggers are set horizontally on firm level ground. The values above the bold lines are based on the crane strength while those below are based on the crane stability.
- 2. The weights of the slings and hooks (120t hook: 1,300kg , 50t hook: 600kg, 8t hook: 250kg) are included in the total rated loads shown.
The boom-side attachment (100kg) is included.
- 3. The total rated load is based on the actual working radius including the deflection of the boom.
- 4. The table below shows the classification of Performances A to G of the total rated load.

Counterweight Outrigger extension width	22t	12t
8.0m	A	B
7.0m	C	D
5.3m	E	F
4.6m	F*	G*

Mark* shows the performance of the boom.

- 5. The table below shows the standard number of part lines for each boom length. The load per line should not exceed 7.5t for the main winch and 8.0t for the auxiliary winch.

A	12.2m	21.0m	29.8m	38.7m	47.5m	J
H	(17)13	7	5	4	4	1

A= Boom length H= No. of part-lines J= Jib/Single top

The value in parenthesis is for the case where an attachment is used.

- 6. The total rated load for the single top shall be the value obtained by subtracting the weight of the hook mounted to the boom from the total rated load of the boom and must not exceed 8.0t.
- 7. Jib operation should be performed on the basis of the boom angle. The working radii are reference values for the case where a jib is mounted to a 47.5m boom.
- 8. The jib should be operated with the boom "telescoping method I".
- 9. When the maximum instantaneous velocity is 10m/s or more, stop crane operation.

Outriggers fully extended

NOTES:

1. The deflection of the boom is not incorporated in the figure above.
2. The above figure is for the boom "telescoping method I".

DIMENSIONS (1/100)

DIMENSIONS (1/100)
[On-site traveling condition]

*-marked dimension: when the guide sheave is removed from the top surface of the base boom section.

TOTAL RATED LOADS

- 1. The total rated loads shown are for the case where the outriggers are set horizontally on firm level ground. The values above the bold lines are based on the crane strength while those below are based on the crane stability.
- 2. The weights of the slings and hooks (50t hook: 600kg, 8t hook: 250kg) are included in the total rated loads shown.
- 3. The total rated load is based on the actual working radius including the deflection of the boom.
- 4. The table below shows the classification of Performances LA to LC of the total rated load.

Counterweight Outrigger extension width	22t	12t
8.0m	LA	LB
7.0m	LB	LC
5.3m	—	—
4.6m	—	—

- 5. The standard hook and number of part lines are shown in the total rated loads chart. The load per line should not exceed 8.0t.
- 6. The elevation wire rope is a 4-part line.
- 7. When the maximum instantaneous velocity is 10m/s or more, stop crane operation.
- 8. Mark θ in the total rated load chart shows the boom angle range (under no load)
- 9. The jib should be operated with the boom "telescoping method I".
