NOTES FOR "ON OUTRIGGERS" TABLE

- 1. Rated lifting capacities shown in the table are based on condition that crane is set on firm level surface. Those above bold lines are based on crane strength and those below, on its stability.
- 2. Rated lifting capacities based on crane stability are according to ISO 4305.
- 3. The mass of the hook (270kg for 30 t capacity, 220kg for 20 t capacity,100kg for 4.0 t capacity),slings and all similarly used load handling devices must be considered as part of the load and must be deducted from the lifting capacities.
- 4. For rated lifting capacity of single top, reduce the rated lifting capacities of relevant boom according to a weight reduction for auxiliary load handling equipment. Capacities of single top shall not exceed 4,000 kg including main boom hook mass and the net capacity must be so reduced.
- 5. Standard number of parts of line for each boom length is as shown below. Load per line should not surpass 39.2 kN {4,000 kgf} for main winch and auxiliary winch.

Boom length	9.7m	9.7m to 16.8m	16.8m to 31.0m	Single top Jib
Number of parts of line	8	6	4	1

The lifting capacity data stored in the AUTOMATIC MOMENT LIMITER (AML-L) is based on the standard number of parts of line listed in the chart.

Maximum lifting capacity is restricted by the number of parts of line of AUTOMATIC MOMENT LIMITER (AML-L).

- 6. The lifting capacity for over-side area differs depending on the outrigger extension width. Work with the capacity corresponding to the extension width. The lifting capacities for over-front and over-rear areas are for "outriggers fully extended". However, the areas (angle **a**) differ depending on the outrigger extension width.

NOTES FOR "ON RUBBER" TABLES

1.

Rated lifting capacities shown in the table are based on condition that crane is set on firm level surface, with suspension lock applied. Those above bold lines are based on tire capacity and those below, on crane stability. They are based on actual working radii increased by tire deformation and boom deflection.
2.

Rated lifting capacities based on crane stability are according to ISO 4305.
3.

The mass of the hook (270 kg for 30 t capacity, 220 kg for 20 t capacity, 100 kg for 4.0 t capacity), slings and all similarly used load handling devices must be considered as part of the load and must be deducted from the lifting capacities.
4.

For rated lifting capacity of single top, reduce the rated lifting capacities of relevant boom according to a weight reductions for auxiliary load handling equipment. Capacities of single top shall not exceed 4,000 kg including main hook.
5.

On tires lifting with "jib" is not permitted. Maximum permissible boom length is 24.4 m.
6.

CREEP is motion for crane not to travel more than 60 m in any 30 minute period and to travel at the speed of less than 1.6 km/h.
7.

During "CREEP" duties travel slowly and keep the lifting load as close to the ground as possible, and especially avoid any abrupt steering, accelerating or braking.
8.

Do not operate the crane while carrying the load.
9.

Tires should be inflated to their correct air pressure of 0.9 MPa {9.0 kgf/cm²}.
10.

For CREEP operation, set Drive select switch to "4-WHEEL(Lo)" and set gear shift lever to "1".
11.

Standard number of parts of line for on tires operation should be according to the following table.

Load per line should not surpass 39.2 kN {4,000 kgf} for main winch and auxiliary winch.

Boom length	Over Front			360° Rotation		
	9.7m	16.8m	24.4m	9.7m	16.8m	24.4m
Number of parts of line (Single top)	6 (1)	4 (1)	4 (1)	4 (1)	4 (1)	4 (1)

The lifting capacity data stored in the AUTOMATIC MOMENT LIMITER (AML-L) is based on the standard number of parts of line listed in the chart.

Maximum lifting capacity is restricted by the number of parts of line of AUTOMATIC MOMENT LIMITER (AML-L).

WORKING AREA

Without outriggers "Over front" operation should be performed within 2 degrees in front of chassis.

WORKING RANGE

Boom Length

NOTE: The above lifting height and boom angle are based on a straight (unladen) boom, and allowance should be made for boom deflection obtained under laden conditions.
The above working range is shown on condition with outriggers fully(6.3m) extended.
