RATED LOAD

- [1] Rated loads shown in the chart are based on the crane strength with the outriggers fully extended on a firm level ground and on the actual working radius including the deflection of boom.
- [2] The weights of hook (30 kg), slings, and any accessories attached to the boom or loadline must be deducted from the above capacities in the chart.
- [3] Capacities shown must reduce in accordance with vehicle weight and loaded condition of truck, crane mounting position, and operating speed.
- [4] The figures in relation to the speed are on the basis of no-load running at rated oil flow conditions.
- [5] In accordance with our policy of constant product improvement, all specifications are subject to change without notice or obligations.

Radio remote control

This permits the operator to have on-the-spot hand control of lifting operations by remote control via radio waves at safe distance. It ensure safe, accurate one-man operation-with energy saving.

FEATURES

Turn Over Prevention Device

When the stability decreases, the Turn Over Prevention Device allows the alarm buzzer to beep continuously -"Beeee"- and automatically stops the crane operation.

Overloading Alarm

When overload occurs, The Moment Limiter Device allows the alarm buzzer to beep continuously -"Beeee!"-

Digital Load Meter

Digital Load Meter gives cargo weight and help operators in safety work.

Outrigger Inter-Lock Device

When Boom is not retracted completely, unable to operate outriggers.

Traveling Lever Inter-Lock Device

Equipped Inter-Lock Device which switches Traveling and Operation. If mis-operate the traveling lever when operating, crane does not travel.

Overlowering Prevention Device

When lowering the hook below ground level, the rope winding the winch drum stops at a point 3 turns before completion to prevent the wire rope from causing damage: the overlowering prevention device.

Emergency Stop Switch

Secure the safety, so Engine and all functions are to be stopped by emergency stop.
